- C. both (a) and (b)

[View All Answers](#)

Question - 57:

Have you ever strongly felt that an IT project has not been acted out as planned, and if so what have you done about it?

Ans:

IT projects are [in]famous for going off course. Impossible deadlines, lack of resources, miss-management... the list is endless. IT is also often guilty of sweeping these mistakes under the carpet and you need to decide whether you will hire people who will continue to allow that to happen or call out these detours before they go too far. This question will both prompt the candidate to consider whether they have ever really stood up against what they think is 'bad IT' in the past, and also whether they would do so in the future. Beyond calling out possible problems, you also want to assess their ability to take ownership and seeing the resolution out, as just pointing out faults and expecting others to deal with them can often be more hindrance than help.

[View All Answers](#)

Question - 58:

A _____ decision is routine one that's made following the completion of a preplanned series of steps.

- A. strategic
- B. structured
- C. simulation
- D. tactical
- E. None of the above

Ans:

- B. structured

[View All Answers](#)

Question - 59:

Can you give an example of a piece of work you have done, which had a lasting positive impact on the business?

Ans:

A skilled IT services professional will be fine tuned to see the full scope of a customer experience and comprehend all the external factors outside their own interaction with the customer, which affects the customer's experience and overall perception of IT. This question is designed to help gauge how well the candidate can open their eyes and mind to see the bigger picture of your IT services. Ideally you want people in your team that can quickly see beyond the single interaction of a phone call or email to the service desk; using the story behind the request and foreseeing all the possible consequences to the business as a result of their own next actions.

- C. MIS
- D. Tactical
- E. None of the above

Ans:

A. prompt

[View All Answers](#)

Question - 61:

What is the importance of emotional intelligence in IT support?

Ans:

Emotional intelligence quota is fast becoming one of the most vital measures of suitability for a customer facing/service role. With IT technicians coming face-to-face with 50+ challenges a day, you want the staff to be motivated by the solutions they provide. That motivation will most likely come from working off the energy by meeting a troubled and challenged customer, then taking them on the journey of listening, understanding, exploration and resolution. By using this question, you will be able to quickly uncover whether this person has a deep enough understanding of their own soft skills and how to apply them in your IT team.

[View All Answers](#)

Question - 62:

Which of the following is not a Common Executive Information System Characteristic?

- (a) It is useful for routine / repetitive operational process
- (b) Used directly by top-level executives

Question - 65:

IT Network & Telephony based Systems Support Manager (MIS) Interview Questions:

Ans:

- * Have you planned and implemented additions and significant modifications to your company's IT infrastructure? Describe your contribution.
- * Tell us about any procedures you have implemented to improve network security or in other areas.
- * Describe the maintenance and administration routines you utilized to ensure effective corporate VOIP/WAN/IT network performance.
- * Have you upgraded the company's telephone or email system to a VOIP or unified messaging system? Describe the process and the factors you considered in choosing the new systems.

[View All Answers](#)

Question - 66:

Would you prefer to spend the day configuring IT kit in the server room, or speaking with end-users on the service desk?

Ans:

This is a little bit of a trick question, in that there is no right answer. An enthusiastic and engaged IT professional should want a good balance of both of these things. Giving technical people the opportunity to express their technical interests in a non-distracting environment is essential to feeding their curiosity and motivation. At the same time you want to uncover how this person benchmarks their technical skills against their confidence and willingness in helping people and building up relationships with their customers.

[View All Answers](#)

Question - 67:

As an IT technician what tools are at the top of your lists as must haves to do an effective job?

Ans:

A bad worker may blame their tools, but a good worker knows when to thank them. IT departments invest a huge amount of money and time into sourcing and implementing the technology and tools their IT staff will use. It is essential to ensure staff recognize the potential of those tools and use them in such a way that enables them to be the best IT professional they can be.

Providing a great IT service means having a strong understanding of the support tools available; service desk, self-service, remote support, IM, release management and CMDB are all good examples of tools an IT support worker has at their disposal to make their job quicker and easier. However, how often have you found IT staff taking the long way round through lack of understanding or knowledge? Finding a candidate who knows their tools and how to leverage those tools to provide better services is key. By asking this question you are not looking for brand names or software suites, but more for the knowledge of what is possible and how engaged that person is with today's technology and what value it creates for them and their customer.
