**Question - 8:**

What is different between webservice and application server?

**Ans:**

The basic difference between a web server and an application server is

Webservice can execute only web applications i.e servlets and JSPs and has only a single container known as Web container which is used to interpret/execute web applications

Application server can execute Enterprise application, i.e (servlets, jsp, and EJBs) it is having two containers 1.

Web Container(for interpreting/executing servlets and jsp)

2. EJB container(for executing EJBs). it can perform operations like load balancing , transaction demarcation etc etc

**Question - 9:**

What is webservice? why it is used?

**Ans:**

Transaction with HTTP request and HTTP response is called webservice.

Using the internet listening the HTTP request and providing the HTTP response is also called webservice.It gives only html output.It will not process business logic .They can provide Http server.They are static.
