Question - 2:

When a program is created and need to be transported to production does selection texts always go with it? if not how do you make sure? Can you change the CTS entries? How do you do it?

Ans:

if you are creating a new program then it will not ask request for selection texts

and they will be automatically included in request and transported.

If you are modifying an existing program and then if you want to change selection

text then it will ask for request for text also then save it in same request and transport.

Question - 3:

What are different tools to report data in SAP? What all have you used?

Ans:

Report Painter and Report Writer

This tool can be accessed as follows.

SAP Menu >>>> Information Systems >>>> Ad Hoc Reports >>>>

Report Painter

: Instead of using ABAP code to write a report in FI and

CO, Transaction MC27 is used by a lot of consultants to

build a report by using Report Painter/ Report Writer

library. Transaction GRCT has many advantages over MC27 in

most cases, and eliminates the need to use transaction

MC27.

Question - 4:

What are the advantages and disadvantages of ABAP/4 query tool

Ans:

-->Interactive functionality not available.

--> No header lines or PF_STATUS is possible.

--> Not possible to add checkboxes, ICONS, Symbols etc

[View All Answers](#)

**Question - 5:**

When we should use ABAP Memory and SAP Memory

Ans:

ABAP Memory- The contents of the ABAP/4 memory are retained only during the lifetime of an external session. You can retain or pass data across internal sessions. The EXPORT to memory and IMPORT from MEMORY statement allow you to write data to or read data from the ABAP memory.

EX: EXPORT it_tab TO MEMORY ID 'ZADI1'.

IMPORT it_TAB FROM MEMORY ID 'ZADI1'.

SAP MEMORY - Otherwise known as global memory is available to a user during the entire duration of a terminal session. It's contents are retained across transaction boundaries as well as external and internal sessions. SET PARAMETER & GET PARAMETER statements allow you to WRITE TO/ READ from the SAP memory.

Question - 8:

How to define the total and sub total in smartform

Ans:

using the events

[View All Answers](#)

Question - 9:

Why sap script client depended and smart forms are client independent

Ans:

By design, SAP script is a word processing tool which displays data on the form with the help of text elements where the logic of those is written in the print program and Forms were designed to be driven from print program, hence are often termed as client dependent. Smart forms are client independent. Bcoz it doesn't use any text elements. It will be executed through a function module. When a print program calls a Smart Form, the form itself takes over to produce output, without any further direction from print program.
