## About Interview Questions Answers

**Interview Questions Answers . ORG** is an interview preparation guide of thousands of Job Interview Questions And Answers, Job Interviews are always stressful even for job seekers who have gone on countless interviews. The best way to reduce the stress is to be prepared for your job interview. Take the time to review the standard interview questions you will most likely be asked. These interview questions and answers on SQL Server Service Broker will help you strengthen your technical skills, prepare for the interviews and quickly revise the concepts.

If you find any **question or answer** is incorrect or incomplete then you can **submit your question or answer** directly with out any registration or login at our website. You just need to visit [SQL Server Service Broker Interview Questions And Answers](#) to add your answer click on the *Submit Your Answer* links on the website; with each question to post your answer, if you want to ask any question then you will have a link *Submit Your Question*; that's will add your question in SQL Server Service Broker category. To ensure quality, each submission is checked by our team, before it becomes live. This [SQL Server Service Broker Interview preparation PDF](#) was generated at **Wednesday 29th November, 2023**

# SQL Server Service Broker Interview Questions And Answers Guide.

## Question - 1:

What are the components of SQL server service broker?

### Ans:

Below are the Service Broker infrastructure components:

Endpoint  
Message Type  
Contract  
Route  
Queue  
Service  
Remote Binding Service

## Question - 2:

Tell me what do we need Queues in SQL Service Broker?

### Ans:

A queue holds the incoming message before they are processed for a service. One queue per service is created.

## Question - 3:

Please explain what is "Asynchronous" communication in SQL Server Service Broker?

### Ans:

In Asynchronous communication, messages can be queued until the service which was down is up and running. Asynchronous communication is loosely coupled. This means that there can be another component waiting to acknowledge the message. In this communication, the sender need not wait for a response but can continue to work.

## Question - 4:

Explain SQL Server Service broker?

### Ans:

SQL service broker provides a mechanism to queue provide reliable messaging for SQL server. Using SQL server, the service broker assists in passing messages between applications. It also rejects messages with invalid format and performs retries. Service broker helps to make scalable and secure database applications.

## Question - 5:

Tell me what are the essential components of SQL Server Service broker?

### Ans:

The components in SQL server Service broker are represented by Server objects used in the messaging. Queue is an object that holds the messages for processing. Dialogues exchanged between two endpoints are grouped by conversation groups. There are some components used at design time called as service definition components used to specify the basic design of the application. Routing and security components are used to define the communications.

## Question - 6:

Explain what is the main purpose of having Conversation Group?

**Ans:**

Any application using service broker communicates by exchanging conversations that is nothing but asynchronous and reliable messages. Conversation group is a group of conversations used to accomplish the same task. These groups help in concurrency. They can also be used to manage the states.

**Question - 7:**

Do you know how to implement Service Broker?

**Ans:**

Using Transact SQL statements service broker can be used. An application can be implemented as a program running outside of SQL Server or as a stored procedure. Service broker uses a number of components to perform a task. A program that starts a conversation creates and sends a message to a service that may or may not respond. Any application that intends to use Service broker does not need any special object model or library. Transact-SQL commands to SQL Server can be sent for processing.

**Question - 8:**

How to encrypt data between Dialogs?

**Ans:**

Using Dialog Security the dialogues can be encrypted at the initiator and then decrypted at the target. Dialogue security can be implemented by implemented as full dialogue security or anonymous dialog security. In full dialogue, both the database that initiates the service and database that calls the service to be implemented needs to have two users. Each service in the conversation is bound by a remotes service. A certificate is associated with each user, so that messages can be encrypted using the recipient's public key and decrypted using the corresponding private key. If anonymous dialog security is used, target service need not explicitly permit access to a remote user. A guest account can be used to generate a session key and encrypt the message.

**Question - 9:**

What is MS SQL Server Service Broker?

**Ans:**

Catalog views serve as a repository to store static metadata like server side and database specific objects. This includes logins, tables, stored procedures etc. It is always better to use catalogue views to view system data rather than using system tables.
