Virtual Iron Job Interview Questions And Answers

Interview Questions Answers

About Interview Questions Answers

Interview Questions Answers . ORG is an interview preparation guide of thousands of Job Interview Questions And Answers, Job Interviews are always stressful even for job seekers who have gone on countless interviews. The best way to reduce the stress is to be prepared for your job interview. Take the time to review the standard interview questions you will most likely be asked. These interview questions and answers on Virtual Iron will help you strengthen your technical skills, prepare for the interviews and quickly revise the concepts.

If you find any **question or answer** is incorrect or incomplete then you can **submit your question or answer** directly with out any registration or login at our website. You just need to visit Virtual Iron Interview Questions And Answers to add your answer click on the *Submit Your Answer* links on the website; with each question to post your answer, if you want to ask any question then you will have a link *Submit Your Question*; that's will add your question in Virtual Iron category. To ensure quality, each submission is checked by our team, before it becomes live. This Virtual Iron Interview preparation PDF was generated at **Wednesday 29th November, 2023**

Virtual Iron Interview Questions And Answers Guide.

Question - 1:

Please tell us what are the services that are provided by Virtual Iron?

Ans:

The services that are provided by Virtual Iron include:
â€¢ Full stack management: is provided for virtual and physical servers that gives dynamic virtualization facilities to the users
â€¢ Simplification in terms of deployment and installation. It allows more simplification to configuration for physical servers.
â€¢ Highly available platform to host different operating system and provide different applications to run on the system.
â€¢ Dynamic virtualization management software that allows user to manage the virtualization software according to their requirements. It includes performance increment, power, optimization, etc.

Question - 2:

Can you please explain what are the features that are included by VI-Center?

Ans:

VI-center is a new addition in enterprise edition of Virtual Iron. It includes easy to use features like management tools to provide the user to manage the virtual machines, create it and removes it according to user's requirements. It provides automating and dynamic features. It gives dynamic performance, capacity, power, and resource management tools to let the user configure the settings for his tasks.

Question - 3:

Please tell us what are the resources that Virtual Iron can virtualize?

Ans:

Virtual iron can virtualize data center resources like CPU, memory, storage, etc. to develop an infrastructure that is virtual to the outside world. This infrastructure is being accessed by the web based console that can easily be deployed, used and managed by the user. It also virtualizes the platform to run more than one operating system and sets up the communication between them. It manages the load balancing and offline server maintenance without downtime.

Question - 4:

Do you know what are the facilities provided by Virtual Iron?

Ans:

Virtual Iron a virtualization platform provides lots of facilities like configuration of physical server in an easy way without the need of much workforce. Converting a physical server into multiple virtual servers and dividing the load of one server to many other servers. Provide scalability on demand and scale the capacity according to the user's demand. Reduce the cost of installing additional servers.

Question - 5:

Explain what does management solution of Virtual Iron offers?

Ans:

Management solution of Virtual Iron offers large virtual computer power with a virtualization platform that supports 32 concurrently running servers. It provides the management solutions to manage workloads for physical servers that are running and providing the resources to the user in real time situations. It also provide on demand resources like hardware resources or software applications to the user.

Question - 6:

Do you have any idea what are the capabilities that are provided by Virtual Iron?

Ans:

Virtual Iron provides dynamic server virtualization with virtual machine management capabilities. It allows easy to use features for the users. The enterprise edition

includes the VI-Center that gives centralized management services that can be used on each host to provide it to many virtual machines. Virtual iron supports both windows and Linux operating system to give the user wide range of operating system to choose from.

Question - 7:

Do you know what kind of virtualization that is being supported by Virtual Iron?

Ans:

Virtual iron supports full virtualization that requires hardware virtualization. It allow the users to add guest operating system unmodified and have better hardware performances. Virtual Iron focuses on increasing the performance and flexibility of the hardware to provide the resources to the user at large amount and allow user to modify and customize according to his requirements.

Question - 8:

Please tell me what is the difference between para-virtualization and native virtualization?

Ans:

â€¢ Para-virtualization requires the guest operating system to run on a host operating system, it allows higher performance and efficiency, whereas native virtualization allow the user to fully virtualize the system by running an operating system that acts as a virtualized platform on which applications can run.
â€¢ Para-virtualization give partial virtualization to the application and hardware, like vmware, virtual box, etc. whereas native virtualization allow the hardware to be virtualized and the application can directly run on that hardware.

Question - 9:

Can you explain what does strategic addition of Virtual Iron consist of?

Ans:

Virtual Iron consists of quick and seamless technologies provided by Oracle. It delivers the products that are unique in features. It provides functionalities like deploy manage and support for many virtual machines environment. It allows the user to use the services that are easy to use with step to step guide and allow full virtualization to be done to communicate between different operating systems.

Question - 10:

Do you know what are the issues that are related to management in Virtual Iron?

Ans:

There are several deployment management issues that are related to Virtual Iron like:
â€¢ Server consolidation: is an issue as it doesn't allow high level of consolidation to be done with the virtualization platform.
â€¢ Server load balancing: is an issue as it allows only few load on the server be balanced and doesn't allow the hardware to be allocated to many resources.
â€¢ Dynamic capacity management: it is an issue as it allows only low level of dynamic capacity management and doesn't allow the scaling to be possible.
â€¢ Disaster recovery: it performs low level of disaster recovery and most of the time the whole system has to be recovered by this way.
