### Question - 6:

How is body onload() function is different from document.ready() function used in jquery?

### Ans:

Document.ready() function is different from body onload() function because of 2 reasons.

1. We can have more than one document.ready() function in a page where we can have only one onload function.
2. Document.ready() function is called as soon as DOM is loaded where body.onload() function is called when everything gets loaded on the page that includes DOM, images and all associated resources of the page.

### Question - 7:

What does dollar Sign (\$) means in JQuery?

### Ans:

Dollar Sign is nothing but it's an alias for JQuery. Take a look at below jquery code

```
$(document).ready(function(){
});
Over here $ sign can be replaced with jQuery keyword.
jQuery(document).ready(function(){
});
```

### Question - 11:

How can we modify css class using JQuery library?

### Ans:

Suppose that Css class has following definition

```
.class
{
font-size:10px;
font-weight:normal;
color:#000000;
}
```

now we want to add border property on above class, so we should follow below code.

```
$(.class).css('border', '1px solid blue');
```

Where \$(.class) name of css class. Now .class will automatically add border property in his class definition.

### Question - 13:

How can we submit a form by ajax using JQuery?

### Ans:

Please follow below code to submit a form by ajax using jquery

```
$(#formid).submit(function() {
$.ajax({
```

```
type: 'POST',
url: 'back.php',
data: 'name=php&location=india',
success: function(msg) {
alert( 'Data Saved: ' + msg );
}
});
}
```

Where formid is the form ID. 'POST' is the method by which you want to send data. You can also use 'GET' method. 'back.php' is the php file which you want to call. 'name=php&location=india' This is values of control. success: function(msg){ alert ( 'Data Saved: ' + msg ); } This is a success function, This will execute after success of you post. Often in Ajax back.php does not refresh because this is cached by browser. To avoid this issue add [cache: false,] in above code. Loads data synchronously. Blocks the browser while the requests is active. It is better to block user interaction by other means when synchronization is necessary.

To avoid this issue add [async: false,] in above code.

### Question - 14:

How can we get value of textbox in jquery?

#### Ans:

Include jquery library in the head section of page. Then use below code.

```
$('#id').val();
jQuery('#id').val();
```

[View All Answers](#)

### Question - 15:

Can we combine JQuery combined with other libraries?

#### Ans:

Jquery combined with other java script libraries like prototype, mootools that time JQuery coding will be conflict with other libraries.

So that time use this command for non -conflict jquery with other java script libraries.

```
jQuery.noConflict();
```

[View All Answers](#)

Jquery run in all browsers.

Jquery is client side scripting language.

Jquery browser depended framework.

Jquery developed by javascript.

[View All Answers](#)

### Question - 17:

What is jQuery UI?

#### Ans:

jQuery UI is a JavaScript library that provides abstractions for low-level interaction and animation, advanced effects and high-level, themeable widgets, built on top of the jQuery JavaScript library, that can be used to build interactive web applications. It was released in September 2007, announced in a blog post by John Resig on jquery.com. The latest release, 1.10.4, requires jQuery 1.6 or later.
