Qooxdoo Interview Questions And Answers Guide.

Question - 1:

Suppose I am familiar with jQuery. How does it compare?

Ans:

As with other typical JS libraries, much of jQuery's features are a subset of the qooxdoo framework. To allow for a jQuery-like programming style, an API very similar to jQuery is provided.

Question - 2:

Is not qooxdoo just another JavaScript library?

Ans:

No. It's also not just a "library", but a "framework". It is much more comprehensive than a typical JS library like jQuery or Prototype. qooxdoo's main focus is on creating full-featured rich internet applications (RIAs), so it comes with a large set of high-quality widgets and features a powerful, platform-independent tool chain. But due to some recent advancements it is now also possible to leverage qooxdoo as a low-level library for extending traditional HTML documents.

Question - 3:

What languages and technologies do we need to know?

Ans:

Not many. qooxdoo features regular object-oriented GUI programming without requiring knowledge of low-level web technologies. No HTML, no CSS, no DOM. Just JavaScript. Even non-JavaScript programmers get easily familiar with qooxdoo's OO capabilities and its tool chain.

Question - 4:

Does qooxdoo come with a server?

Ans:

No. If you already have an existing backend that serves HTTP (or HTTPS) requests, it's probably fine to continue using it. Optionally qooxdoo offers several RPC servers for an elegant client-server communication. BTW, during development of your client application the local file system often is sufficient, without the need to use a real server.

Question - 5:

Which browsers are supported?

Ans:

A qooxdoo application runs in all major web browsers - with identical look & feel.

Question - 6:

Who developed qooxdoo?

Ans:

qooxdoo was initiated and is maintained by 1&1, the world's biggest web hosting company. There is a team of full-time core developers as well as many committers and contributors.

Question - 7:

Is qooxdoo freely available?

Ans:

Yes. qooxdoo is Open Source, dual-licensed under LGPL/EPL, i.e. the "GNU Lesser General Public License (LGPL)" and the "Eclipse Public License (EPL)". As a recipient of qooxdoo, you may choose which license to receive the code under.

Question - 8:

What is Qooxdoo?

Ans:

qooxdoo is an open source Ajax web application framework. It is an LGPL- and/or EPL-licensed multipurpose framework that includes support for professional JavaScript development, a graphical user interface (GUI) toolkit and high-level client-server communication.
