Peoplesoft Tools Interview Questions And Answers Guide.

Question - 1:

How to taken care performance management in People Tools?

Ans:

Indexing tables on the database side helps in batch processing a great deal. Analysing tables helps. If there is custom code, make sure the SQL queries used are written well with the use of proper keys and joins are correct as well.

Database: Oracle, SqlServer, DB2

PIA: IE 5.0 or greater

[View All Answers](#)

Question - 32:

How to creating prompt table dynamically for the specified field?

Ans:

by using edittable.

[View All Answers](#)

Question - 33:

How the output of a sql query be stored in a variable using peoplecode?

Ans:

You can use SQLExec to do the same.

SQLExec("SELECT EMPLID FROM JOB",&Emplid);

The value of EMPLID gets stored in the variable &Emplid.

[View All Answers](#)

**Question - 34:**

Explain the numbers of sub pages and secondary pages that can be created in one level?

Ans:

Sub page:

Mainly use for sub records. We can place sub records in to sub page.

Secondary page:

It is used to enter additional data, rarely entered data & unimportant fields.

There can be any number of sub-pages but only one secondary page in a level. We can insert through push button or domodal function using peoplecode.

[View All Answers](#)

Question - 35:

Tell me the benefits of set control field in record field properties?

Ans:

Benefits of set control field:

If we specify one field as a set control field then we will retrieve data based on this when we are using prompt table. Based on this field only we can have valid prompt list at the time of prompt button clicking.

[View All Answers](#)

Question - 36:

Tell me what will be the output of an application engine to use component variables instead of state record?

Ans:

Well, Component variables can be used to carry data from one section to another. The scope of component variable remains throughout the program. They can be used in place of state record provided you do not want a restart facility and dynamic section calls.

[View All Answers](#)

Question - 37:

Which HTTP servers and Java servlet engine combinations are supported with People Tools?

Ans:

IBM WebSphere and Oracle Weblogic.

[View All Answers](#)

Question - 38:

Tell me the use of set control field in record field properties?

Ans:

Set Control id is used when you want to share tables in Peopletool applications.

This key identifies the sets of information in the table that are shared by multiple companies or business units under your corporate umbrella. You then specify a set control field, which identifies which fields map between the original key and the TableSets. You can specify any field that logically identifies the TableSet. In this case, you might assign Company as the set control.

[View All Answers](#)

Question - 39:

How to bring advanced search page before normal search page?

Ans:

There is a setting available in Component properties to make either the Normal Search Page or the Advanced search page to appear first.

[View All Answers](#)

Question - 40:

Explain mandatory property of App.engine?

Ans:

1: Main is the required section in Application Engine.

2: There can be multiple steps in single application engine, but atleast one step should be part of AE.

3: Similarly you can have multiple actions in AE but you should have minimum one action part of step.

4: Save as AE

[View All Answers](#)

Question - 41:

Can you please explain the difference between temporary table and SQL view in peoplesoft?

Ans:

Temporary Table:

Temporary tables are used for running PeopleSoft Application Engine batch processes. Temporary tables can store specific data to update without risking the main application table.

SQL View:

It is not a physical SQL table in the database, but rather fields from one or more SQL tables that are reorganized into a different sequence. This provides an alternate view of information that is stored in tables.

[View All Answers](#)

Question - 42:

Tell me the use of temporary records and state record in application engine?

Ans:

Temporary table:

To allow other users to access the same table that has been using by the AE program. These are mainly used in batch processing. These can store specific data to update without aff.
