Question - 24:

Can you please explain the difference between Dataset and Datareader?

Ans:

DataReader:

- * Datareader has read only access to the data and it is set to be forward only.
- * Datareader cannot persist contents as it is read only
- * Datareader is connected architecture

Dataset:

- * Dataset can hold more than one table from the same data source. It even stores relationships between tables.

- * Dataset can persist contents
- * Dataset is disconnected architecture

Question - 36:

Can you please explain the difference between Dispose and Finalize()?

Ans:

Finalize method is called by Garbage collector which helps us to make free of unmanaged resources. There are some other resources like window handles, database connections are handled by IDisposable interface.

Dispose method is handled by IDisposable interface to explicitly release unused resources. Dispose can be called even if other references to the object are alive.

**Question - 43:**

What is Private assembly?

Ans:

A private assembly is normally used by a single application and it is stored in application's directory.

[View All Answers](#)

Question - 44:

What is Public assembly?

Ans:

A public assembly or shared assembly is stored in Global Assembly Cache(GAC) which can be shared by many applications.

[View All Answers](#)

Question - 45:

List the different types of assembly?

Ans:

There are two types of assembly:

- * Private
- * Public

Question - 50:

What is Pre-JIT?

Ans:

Pre-JIT - Compiles at the time of deployment of an application.

[View All Answers](#)

Question - 51:

Explain JIT?

Ans:

JIT is termed as Just in Time compiler which is used as a part of runtime execution environment. There are three types of JIT and they are:

- * Pre-JIT
- * Econo-JIT
- * Normal JIT
