Audiology Interview Questions And Answers Guide.

Question - 1:

What is conductive hearing losses? What causes such hearing impairment?

Ans:

Hearing loss that is caused by a problem in the middle or external ear are called conductive hearing losses. Such difficulty in hearing occurs when problem lies in the conduction of sound to the cochlea.

The cause of such impairment is

- * Excessive wax in the ear canal
- * Fluid accumulated in the ear due to infection
- * Discontinuity between the ossicles

[View All Answers](#)

Question - 2:

Can you explain what does your work entail?

Ans:

First I consult with my patient about their lifestyle and what specific situations they're having difficulty communicating in. Next I examine their ears and ear canals to rule out any medical conditions, and then I perform a comprehensive audiological evaluation to map their hearing and measure their ability to understand speech under various listening conditions. Finally, I review the test results with the patient and settle upon a treatment option.

[View All Answers](#)

Question - 3:

Explain what education, schooling, or skills are needed to do this?

Ans:

Audiology requires a bachelors degree and four-year doctoral program. One important necessary skill is communicating well with others, since it's a people-centered profession. You do need lots of patience as well since you often have to reinstruct patients several times on the same issue (how to put in batteries, etc.).

[View All Answers](#)

Question - 4:

What is your greatest benefit to helping others hear better?

Ans:

My greatest benefit is knowing that I have improved their quality of life. It makes me feel good knowing that I have given them something back which they had lost.

[View All Answers](#)

Question - 5:

Tell me what do you dislike in Audiology?

Ans:

I don't like dealing with insurance companies. It's difficult to get clear answers regarding how much they will cover for a specific patient or procedure, and they often take quite a while to pay us.

[View All Answers](#)

Question - 6:

Tell us a hearing conservation program you have implemented?

Ans:

Well, During my bachelors at college, we arranged a hearing screening camp and counselled a group of workers working at some industries about the hazardous effect of noise on their hearing and lifestyle.

[View All Answers](#)

**Question - 7:**

Tell me what else would you like people to know about your job/career in Audiology?

Ans:

I really enjoy audiology, and find it to be a rewarding profession. It's a nice blend of technology and people.

[View All Answers](#)

Question - 8:

Explain how did you get started?

Ans:

I wanted to be in a profession where I could help people, and my undergraduate degree is in communicative disorders (speech pathology). I really enjoyed my audiology classes (audiology and speech pathology are related fields and we cross-train to some extent), so I changed to audiology for my graduate degree.

[View All Answers](#)

Question - 9:

How much money did/do you make starting out as an Audiologist?

Ans:

Starting salaries are in the range of \$42,000 per year and up. I made around \$20 per hour when I started back in the 1980's.

[View All Answers](#)

Question - 10:

Tell me how do you market yourself? To reach new patients?

Ans:

I will tell my patient that I will do my best for their improvement and I will do my best for them. I believe in mouth publicity.

[View All Answers](#)

Question - 11:

When giving initial exams to patients in the past, walk me through your process?

Ans:

Taking a history and finding out the patient's concerns
Performing otoscopy to make sure ears are free of wax/abnormalities
PTA with masking if necessary
Consider ENT referral at this stage if any complications
Discuss hearing aids with client
Take Imps/Fit open aids

[View All Answers](#)

Question - 12:

When did you decide you wanted to be an audiologist?

Ans:

I decided I wanted to be an audiologist very early on. Both my grandmother and mother have hearing loss and I made a promise to them to be able to help them with their communication and I know that becoming an audiologist will be one of the proudest moments in my life and I am hopeful that seal beach will be part of that.

[View All Answers](#)

Question - 13:

What are the types of tinnitus?

Ans:

Tinnitus are classified in two:

* Pulsatile: It is caused due to muscle movement near the ear, blood flow problem in neck or face, changes in the ear canal.

* Non-pulsatile: It is caused due to the nerves involved with hearing, you may hear the sound in both ears.

[View All Answers](#)

Question - 14:

Can you explain what advice would you offer someone considering this career?

Ans:

I recommend shadowing an audiologist to see if you will enjoy this field. There are many specialties in audiology now: pediatrics, hearing aids, cochlear implants, intraoperative monitoring, vestibular testing/rehabilitation, and diagnostics to name a few.

[View All Answers](#)

Question - 15:

What can you contribute to this job in Audiology?

Ans:

Your emphasis in answering this question should be on your strengths and accomplishments, and how they might integrate with the job and the facility.

[View All Answers](#)

Question - 16:

How much money do Audiologists make?

Ans:

The salary for audiologists varies by practice type, as well as geographic location. The average salary is around \$73,000 per year, and private practice owners generally make more than non-owner audiologists. Audiologists can make over \$100,000 depending on their experience and compensation package.

[View All Answers](#)

Question - 17:

How much time off do you get/take?

Ans:

I own my own practice, so I set my own hours and vacations. I generally work 35 hours per week, and take several weeks vacation per year.

[View All Answers](#)

Question - 18:

Tell us what is ASSR (Auditory Steady State Response)?

Ans:

It is a testing method used to check the ability of hearing in children, who are too young for traditional audiometric testing.

[View All Answers](#)

Question - 19:

What form of aural rehabilitation do you use in your current position?

Ans:

Provision of amplification to meet their hearing needs, and auditory training.

[View All Answers](#)

Question - 20:

Tell us what is sensorineural hearing losses?

Ans:

Hearing losses that are caused by a problem in the inner ear or along the auditory nerve are called sensorineural hearing losses. It happens due to the inability of the nerve to carry the signal to the brain.

[View All Answers](#)

Question - 21:

Have you dealt with a patient that you could not provide hearing too?

Ans:

Yes, instead we focused on other assistive devices. Referred to social services for support such as flashing doorbells etc.

[View All Answers](#)

Question - 22:

Tell me how well did you work with the front office staff at your previous job?

Ans:

Very well. I feel it is important to build a good relationship with the front staff because you really rely on each other to see as many patients as possible and give patients the best experience in your office.

[View All Answers](#)

Question - 23:

What all sectors an audiologist can work?

Ans:

An audiologist is a health professional, and he can work in sectors like:

- * Hospitals
- * Clinics
- * Private practices
- * ENT offices
- * Universities
- * Government Institute
- * Military Hospitals

[View All Answers](#)

Question - 24:

How fluid pressure inside ear can be measured?

Ans:

Two important components are used to measure the fluid pressure in the ear; one is summing potential (SP) and the action plan (AP). The audiologist collects several responses from the ear in the waveform with the help of electrochelograph, which contains these two components (SP & AP). Both of these waveform components are direct results of providing sound stimulation to the cochlea. The calculation is made on the SP/AP ratio, and any increase in the value of this SP/AP

ratio indicates an increase in fluid pressure in the ear.

[View All Answers](#)

Question - 25:

What is most rewarding?

Ans:

I love the look on the patient's face and their family's reaction when they realize what they can hear with properly fitted hearing aids. Most people tell me they wish they had gotten hearing aids sooner.

[View All Answers](#)

Question - 26:

Suppose if you could be in another career, what would you pick?

Ans:

If I had to pick another career I would be a nurse. I enjoy helping people and improving others lives which I feel both fields do.

[View All Answers](#)

Question - 27:

What is it about this particular job that interests you in Audiology?

Ans:

A question like this is a good segue into informing the interviewer that you know something about the facility. It is appropriate to mention areas of expertise for which the institution might be known and how they might be of particular interest to you.

[View All Answers](#)

Question - 28:

Tell me important part of ears in Audiology?

Ans:

Auditory canal:

- Cochlea
- Malleous
- Incus
- Stapes
- Semicircular canal
- Auditory nerve
- Estachian tube
- Oval window
- Eardrum

[View All Answers](#)

Question - 29:

Can we cure sensorineural hearing impairment? What causes such hearing impairment?

Ans:

Such type of hearing impairment are incurable and can be remediated to a certain extent. Although new technology has shown immense potential to improve hearing ability, is still far to eliminate hearing impairment completely.

- * Damage to the cochlear hair cells
- * Tumor on the auditory nerve

[View All Answers](#)

Question - 30:

What brand do you prefer working with?

Ans:

I have worked with a variety of hearing aids including Siemens, Oticon, Starkey and phonack aids. I have most experience with siemens hearing aids but I prefer the software and the quality of Oticon aids.

[View All Answers](#)

Question - 31:

Tell us other than your audiogram, how do you assess a patients needs?

Ans:

Questionnaires (such as the HHIE), Speech in Noise testing,

[View All Answers](#)

Question - 32:

Tell us what are triggers tinnitus?

Ans:

- * A buildup of earwax

- * Taking too much of antibiotics
- * Intake of too much of alcohol
- * Eardrum rupture
- * Dental or Temporomandibular problems
- * Direct injuries to ear or head
- * Injury to the ear due to radiation therapy
- * Excessive dieting and weight loss
- * Repeated exercise with the neck
- * High blood pressure, Migraine, Multiple Sclerosis, Neurological disorder, etc.

[View All Answers](#)

Question - 33:

Do you enjoy visiting clinics, hospitals, schools, while working?

Ans:

Yes, ofcourse.

[View All Answers](#)

Question - 34:

Have you ever outfitted a patient with a hearing aid, and it went wrong? Maybe the device did not work properly?

Ans:

Yes, either the hearing was faulty.

[View All Answers](#)

Question - 35:

Tell us some of the use of OAE (Otoacoustic Emissions) testing?

Ans:

- * Screening tool for hearing loss in infants, children and newborns
- * Determines non-organic or functional hearing loss
- * Differential diagnosis between retro-cochlear and cochlear hearing loss
- * Identifying cochlear function in patients with tinnitus
- * Can give an early indication about cochlear dysfunction
- * Can use to evaluate the toxicity of the medication used for ear

[View All Answers](#)

Question - 36:

Explain how do you make money/or how are you compensated?

Ans:

I have a mix of private pay and insurance patients.

[View All Answers](#)

Question - 37:

Do you prefer working with children or senior citizens?

Ans:

Children, however, I do enjoy working with adults.

[View All Answers](#)

Question - 38:

Can you tell us what do you do for a living?

Ans:

I am an audiologist.

[View All Answers](#)

Question - 39:

Can you tell us how would you describe what you do?

Ans:

I diagnose hearing loss and prescribe solutions that will help my patients to hear better.

[View All Answers](#)

Question - 40:

What tools do you use to ensure the hearing instruments are appropriately working for your patient?

Ans:

You can carry out rems and subjective tests on the hearing aid. But most importantly talk to the patient and do a questionnaire to find out the benefit they are receiving.

[View All Answers](#)

Question - 41:

What learning experiences, or events, would you like to attend that might improve your own education?

Ans:

Conferences, local and national level, hearing aid manufacturer meetings to update me on latest technology, training sessions for testing as software always changes.

[View All Answers](#)

Question - 42:

What is your favorite environment to work in?

Ans:

An environment of staff that work together as a team.

[View All Answers](#)

Question - 43:

Tell us what are your goals/dreams for the future?

Ans:

I would like to expand my practice and open up more locations so that I can help more people.

[View All Answers](#)

Question - 44:

What was the most difficult patient you've had to test and outfit with a hearing device?

Ans:

Sudden hearing loss, 40-year-old.

[View All Answers](#)

Question - 45:

Basic Experience Based Audiologist Interview Questions:

Ans:

- * Tell me a little bit about yourself.
- * Tell me about your current work setting.
- * What social skills resources do you use for children with autism spectrum disorders?
- * Tell me about the most difficult client you've ever had and how you worked through it.
- * Tell me about the hardest therapy session you've ever had and how you made it work.
- * What experience do you have with children with ___(whatever disorder the site specializes in serving)___?
- * What AAC/Assistive Technology experience do you have?
- * How do you involve parents and teachers in treatment?
- * How would you deal with a parent who questions your therapy practices?

[View All Answers](#)

Question - 46:

Top Behavioral Audiology interview questions:

Ans:

- * What is more important to you: the money or the work?
- * A team experience you found disappointing.
- * What do you like and dislike about the job we are discussing?
- * How do you keep track of things you need to do?
- * How do you decide what gets top priority when scheduling your time?

[View All Answers](#)

Question - 47:

Advanced Video Based Audiology interview questions:

Ans:

- * Have you ever had difficulty working with a manager?
- * How do you think you can make a contribution to this company?
- * What was the most difficult period in your life, and how did you deal with it?
- * Describe a situation in which you had to collect information.
- * What would you say are your strong points?

[View All Answers](#)

Question - 48:

Top Strengths and Weaknesses Based Audiology interview questions:

Ans:

- * What support training would you require to be able to do this job?

- * Do you have the qualities and skills necessary to succeed in your career?
- * List five words that describe your character.
- * Tell us about the last time you had to negotiate with someone.
- * What are your salary requirements.

[View All Answers](#)

Question - 49:

Technical Competency Based Audiology interview questions:

Ans:

- * Tell me about an important issue you encountered recently.
 - * Can you describe a time when your work was criticized?
 - * Tell me about an important goal that you set in the past.
 - * When given an important assignment, how do you approach it?
 - * Did you feel you progressed satisfactorily in your last job?
- You may receive very helpful advice from an outsider who, like the interviewers, may tell if you answer properly or not. Connect your ability to the company's requirements. Answer as sincerely as possible. Don't lie as if you are discovered, it shall be very bad situation.

Question - 57:

Basic Communication skills Based Audiology interview questions:

Ans:

- * Time when you made a suggestion to improve the work.
- * What has been your most successful experience in speech making?
- * What do you see yourself doing within the first days of this job?
- * What major challenges and problems did you face?
- * What's most important to you in a new position?

Never use any adjectives for these sort of Audiology interview questions. Make sure your eye contact with the interviewers during the interview. The best strategy for effectively answering these tough Audiology interview questions is to prepare for it.

[View All Answers](#)

Question - 58:

Traditional Audiology Interview Questions:

Ans:

- * Describe the most difficult patient you've had to test and outfit with a hearing device. How did you handle the situation?
- * Tell me about a time when one of your patients wanted to return his hearing aids. How did you handle the situation? How might this situation have been avoided?
- * How do you maintain a positive relationship with your office and support staff?
- * How would you handle an irate parent/teacher/principal?
- * How would you manage a combative adult patient?
- * Walk me through your process of giving initial exams to patients.
- * With what assistive devices are you most familiar with?
- * What hearing aid brands do you recommend for children?
- * What is a comfortable caseload size for you?
- * What are some references you recommend to your patients to learn more about hearing aids, cochlear implants, or other hearing assistance technology?
- * What is your philosophy about the various communication approaches used by children who are deaf or hard of hearing?
- * What tools do you use to ensure the hearing instruments are appropriately working for your patient?
- * Why do you think working at our hospital will be a good fit for you?
- * Why do you prefer working in a school environment over a hospital or clinic?

[View All Answers](#)

Question - 59:

Tell us have you ever had a patient want to return a hearing aid? How did you handle that?

Ans:

This question is intentionally asked to see how you interact with patients. Of course, you can't take a used hearing aid, but what you can do is find out why the patient

wants to return it. Is it not comfortable? Are they not using it correctly so they feel it doesn't work? Is it a cost issue? Because of your ability to interact with patients, you'll be able to let the interviewer know that you'll take the time to meet with the patient, hear their concerns and figure out a plan together.

[View All Answers](#)

Question - 60:

What are your strengths and weaknesses in Audiology?

Ans:

Write them down to organize your thoughts. Compose examples and situations where you have excelled in demonstrations of your strengths. Do not dwell or belabor weaknesses. It would be better to talk about areas you wish to improve and skills you want to perfect.

[View All Answers](#)

Question - 61:

Why sometimes we feel a ringing or hissing sound in the ear?

Ans:

Hissing or ringing sound is very normal, and it's not a serious condition. It is referred as tinnitus, which is not a condition itself but a symptom of an underlying condition due to age-related hearing loss, ear injury or a circulatory system disorder.

[View All Answers](#)

Question - 62:

If a patient arrived at your office for an initial visit but had no appointment and you were really busy, how would you make time for the potential patient?

Ans:

I would ask them what their concern is and will give them an overview of the procedure that they need. Will then schedule them for another appointment so as not to hasten the trial or test.

[View All Answers](#)

Question - 63:

Tell me different types of hearing aids that are popular among people?

Ans:

The types of hearing aids that is popular are

- * Completely in canal (CTC)
- * In the canal (ITC)
- * Half shell in the ear (ITE)
- * Full shell in the ear (ITE)
- * Traditional behind the ear (BTE)
- * Open fit behind the ear (BTE)

[View All Answers](#)

Question - 64:

Can you tell us what is most challenging about what you do?

Ans:

It's really important to stay up-to-date on the latest research and technology, since the field changes so fast. Also, with hearing aids I'm working against many erroneous beliefs that patients come in with ("hearing aids don't work", etc.) that I have to overcome before I can help them.

[View All Answers](#)

Question - 65:

Do you know what is Audiogram?

Ans:

An audiogram is a graphic demonstration of audiometric data. It represents a picture of your hearing ability. It is a graph that represents the softest sound a person can hear at different pitches or frequencies.

[View All Answers](#)

Question - 66:

Do you know what is "Otoacoustic emissions" (OAE)?

Ans:

"Otoacoustic" emissions are low level, inaudible sounds produced by the outer hair cells of the inner ear. This sound occurs spontaneously or in response to clicks or tones. OAE is normally observed in the normal person but may be absent if the person has mild conductive or cochlear hearing loss.

[View All Answers](#)

Question - 67:

Have you ever had a patient want to return a hearing aid?

Ans:

Yes I have had a patient return a hearing aid through the lions club foundation. It was a pair of donated in the ear hearing aid. I was actually picking up this case after another audiologist and responsible for fitting the hearing aid. She was so unahappy with the aid that I knew it wouldnt work. I want to be able to provide the patient with amplication he or she wil use not dispise. I tried to have her try it on and she was just not happy. I talked to her son and made some phone calls and had lions

club donate a BTE hearing aid with a slim tube.

[View All Answers](#)

Question - 68:

Can you explain what is a common misconception people have about what you do?

Ans:

It's getting better now, but when I used to tell people I was an audiologist they didn't even know what that was.

One thing I hear is that many people think that all hearing aids are the same so they just select their hearing aid provider based on price, but in reality there is an art to fitting hearing aids. Experience matters!

[View All Answers](#)

Question - 69:

What's a typical work week like?

Ans:

I usually have a mix of new and returning patients throughout the week, so on any given day I can be doing hearing evaluations, hearing aid fittings, and follow-up hearing aid services. Over a one year period I will see a typical patient for their initial evaluation, their hearing aid fitting, two or three follow-up fitting visits, and a few clean and check visits.

[View All Answers](#)

Question - 70:

What are the parameters or levels on which hearing disability is measured?

Ans:

- * 0-25 dB - Hearing with normal limits
- * 26-40 dB - Mild hearing loss
- * 41-55 dB - Moderate hearing loss
- * 56-70 dB - Moderately severe hearing loss
- * 71-90 dB - Severe hearing loss
- * 91+ dB - Profound hearing loss

[View All Answers](#)

Question - 71:

What type of rehabilitation training do you enjoy the most and consider yourself the best at?

Ans:

Adult rehabilitation and tinnitus retraining therapy.

[View All Answers](#)

Question - 72:

What tools does Audiology use?

Ans:

Audiologist use tools like:

- Otoscope
- Tympanometer
- Audiometer
- Auditory brainstem response
- Electronystagmography
- Otoacoustic emission, etc.

[View All Answers](#)

Question - 73:

Tell us what is electrocochleography test?

Ans:

Electrocochleography is an inner ear test that uses sound stimulation and the resulting electrical measurements. In this technique, fluid pressure inside inner ear is measured, excessive fluid pressure may cause hearing loss.

[View All Answers](#)

Question - 74:

Explain me do you feel that you personally benefit from this career choice? How so?

Ans:

Steer clear of the obvious salary, time off and flexible schedule answer. The interviewer wants to know how you this career field has made you more empathetic, more organized or even a better person. Think back to the time before you became an Audiologist and how you are better now because of it. Share a story or a characteristic with the interviewer.

[View All Answers](#)

Question - 75:

What do you want to be doing five years from now in Audiology?

Ans:

This is a commonly asked question, the answer to which can be very telling about your thought processes as well as personal organization. If you cannot answer this question, you are possibly indicating a lack of direction. It does not give assurance to the prospective employer that you are worth the time and money they will be investing in you.

[View All Answers](#)

Question - 76:

What procedures do you recommend using when giving a patient their initial exam?

Ans:

Case history, otoscopy, tympanometry, air-conduction testing, bone-conduction testing, word-recognition testing, speech reception thresholds, counseling, and (if appropriate) rehabilitation options (hearing instruments, hearing assistive technology, etc.)

[View All Answers](#)

Question - 77:

How do you currently follow up with your patients to monitor the status of their hearing aid?

Ans:

My patients are fit with hearing aids and scheduled a two week follow up at the initial fitting. After that I schedule a four week check during their trial period to make sure they are comfortable. Patients are seen every six months for check ups and cleanings and once a year for a hearing test.

[View All Answers](#)

Question - 78:

What CAPD is and what are the tests used to check CAPD?

Ans:

CAPD stands for central auditory processing disorder, and it is a set of problems that occur in different types of listening tasks, especially observed among children's. To check CAPD various tests are performed like

- * Auditory brainstem response
- * Middle Latencies
- * Late latency
- * Event-related response
- * fMRI

Question - 79:

Tell me what is cochlea in the ear?

Ans:

Cochlea plays a major role in hearing phenomena; it contains fluid called perilymph and tiny hairlike projections called cilia. Together they do the function of converting sound waves into a nerve impulse interpreted by the brain as sound.
