XPath Interview Questions And Answers Guide.

Question - 1:

What is New in XPath 2.0?

Ans:

he primary purpose of XPath is to address parts of an XML document. XPath uses a compact, non-XML syntax to facilitate use of XPath within URIs and XML attribute values. XPath gets its name from its use of a path notation as in URLs for navigating through the hierarchical structure of an XML document.

Question - 4:

Give some examples of XML DTDs or schemas that you have?

Ans:

Although XML does not require data to be validated against a DTD, many of the benefits of using the technology are derived from being able to validate XML documents against business or technical architecture rules. Polling for the list of DTDs that developers have worked with provides insight to their general exposure to the technology.

Question - 5:

How do I configure an XPointer processor?

Ans:

There is no required configuration for the XPointer Framework. The uberjar command line utility provides some configuration options. Applications configure individual XPointer processors when they obtain an instance from an appropriate XPointerProcessor factory method.

Question - 6:

What is XPath?

Ans:

An addressing mechanism for identifying the parts of an XML document. XPath, the XML Path Language, is a query language for selecting nodes from an XML document. In addition, XPath may be used to compute values (e.g., strings, numbers, or Boolean values) from the content of an XML document.
