About Interview Questions Answers

Interview Questions Answers. ORG is an interview preparation guide of thousands of Job Interview Questions And Answers, Job Interviews are always stressful even for job seekers who have gone on countless interviews. The best way to reduce the stress is to be prepared for your job interview. Take the time to review the standard interview questions you will most likely be asked. These interview questions and answers on JMX will help you strengthen your technical skills, prepare for the interviews and quickly revise the concepts.

If you find any **question or answer** is incorrect or incomplete then you can **submit your question or answer** directly with out any registration or login at our website. You just need to visit <u>JMX</u> <u>Interview Questions And Answers</u> to add your answer click on the *Submit Your Answer* links on the website; with each question to post your answer, if you want to ask any question then you will have a link *Submit Your Question*; that's will add your question in JMX category. To ensure quality, each submission is checked by our team, before it becomes live. This <u>JMX Interview preparation PDF</u> was generated at **Wednesday 29th November, 2023**

You can follow us on FaceBook for latest Jobs, Updates and other interviews material. www.facebook.com/InterviewQuestionsAnswers.Org

JMX Interview Questions And Answers Guide.

Question - 1:

How is the application JVM configured?

Ans:

The application JVM is configured with the following options:

- * com.sun.management.jmxremote
- * com.sun.management.jmxremote.port=1088
- * com.sun.management.jmxremote.authenticate=false
- * com.sun.management.jmxremote.ssl=false

Question - 2:

What are the advantages of setter dependency injection?

Here are a few advantages of Setter:

- * Natural for Java Beans
- * Avoids overly long constructors
- * Can be inherited
- * Easier to understand in that properties have names
- * Constructor args don't have names

How to access JMX (Java Beans) from a process running in docker container?

You have to expose the JMX port to the host and even used Sun specific options while running the Java process.

You are able to telnet to the host ip and the exposed JMX port, which tells that it is accessible. But I can't figure out a way to use JConsole and connect to the JMX service running in the container.

- * Djava.rmi.server.hostname=\$JMX_HOSTNAME
- * Dcom.sun.management.jmxremote.port=\$JMX_PORT
- * Dcom.sun.management.jmxremote.rmi.port=\$JMX_PORT

What are the various actions performed when an application context is created?

Ans:

Here are 5 steps:

- * Read bean file XML (or process annotations). Build internal "map" of beans and determine dependency tree.
- * Post process the definitions e.g. resolve \${variables}
- * Allocate objects dependency inject constructor args and invoke setter.
- * Perform any initialisation 3 approachs: @PostConstruct, init-method, InitializingBean
- * Bean post-processors e.g. wrap with proxy, @Required

Question - 5:

What is a named pointcut and why to use one?

A pointcut expression that has a name so it can be reused.

Resons To use:

* Annotation: @Pointcut applied to a dummy method - name of the dummy method is the name of the pointcut expression.

* XML aop:pointcut id=".." expression=".."

Question - 6:

List some types of advice?

Ans:

Types of advice:

- * Before
- * AfterReturning
- * AfterThrowing
- * After
- * Around

Question - 7:

What is an advice in JMX?

Ans:

he code that implements the cross cutting-concern that will be inserted at each join-point.

View All Answers

Question - 8:

What is a join-point?

Ans:

Joint-point is an expression that defines zero or more join-points.

View All Answers

Question - 9:

What is a cross-cutting concern?

Ans:

A requirement that cuts across all the natural modules of your application.

Examples:

Tracing, security, transactions, business rules.

Two problems with cross-cutting concerns.

* Code tangling - method doing too many unrelated tasks

* Code scattering - code duplication leading to maintenance headache

View All Answers

Question - 10:

What is lazy initialization?

Ans:

Bean is not allocated until it is actually needed - dependency injected - or requested via getBean(). specify lazy="true" (false by default). Only useful if bean genuinely may never be used in most runs of the application.

View All Answers

Question - 11:

What is a nested bean?

Ans:

Scopes the bean within the bean that uses it. One less bean id in the set of bean names.

View All Answers

Question - 12:

List 2 examples of anonymous bean?

Ans:

Two examples:

- * Nested or inner beans
- * Configuration beans

Question - 13:

What are the 5 scopes defined in Spring?

Δne-

- 5 scopes defined in Spring:
- * Singleton
- * Prototype

- * Session only valid in a Web application context
- * Request ditto
- * Custom

Question - 14:

How does a Spring Factory Bean work?

Ans.

It is created by Spring automatically, any setters are called on the factory then its getObject() method is called to allocate the actual bean.

View All Answers

Question - 15:

What is the advantage of constructor dependency injection?

Ans:

Here are a few advantages:

- *Constructor
- *Mandatory
- *Mutable
- *Natural Java approach.

View All Answers

Question - 16:

How is setter dependency injection specified a configuration file?

Ans:

<constructor-arg... and <pre>property...

View All Answers

Question - 17:

How is dependency injection performed in the bean-file XML?

Ans:

There are nested elements within each bean definition.

View All Answers

Question - 18:

Why is dependency injection useful?

Ans:

Different collaborators for different environments can be injected - test, production, test-database, real database. This allows classes to be tested independent of its collaborators (makes it easy to pass in stub or mock objects).

View All Answers

Question - 19:

What is dependency injection?

Ans:

A pattern (design) whereby collaborators are passed into an object from the outside - the object does not allocate them for itself.

Question - 21:

How will you check if JMX agent is working in Tomcat?

Ane:

When Tomcat is running as a service on Windows, you do not need setenv.bat, you need to use tomcat8w.exe and GUI toll for adding options.

Question - 22:

What if there is no JMX data?

Ans:

No JMX-related output in the logs. I can connect to the JVM with jconsole using the supplied credentials, browse to the configured mbean, jackhammer the Refresh button and get new values. Splunk, however, gets nothing, and leaves no indication as to why. Searching for "host=redacted" or "source='jmx://redacted'" yields nothing.

This is not a complicated setup, nor is it a complicated app. Single server test environment, just trying to get JMX data into Splunk directly instead of having to do some nasty search-time field extraction after indexing data output from JMXTrans text files. It's currently running on JDK 1.7, I tried 1.6 for science to no avail. No idea how to proceed since I'm not getting any errors and there doesn't appear to be a way to raise the log level.

Question - 23:

How would you connect JMX monitoring to Tomcat?

Ans:

You have to install the jmx_ta on a 6.2 forwarder and getting the following error"

12-04-2014 16:08:02.884 +0000 ERROR ModularInputs - Introspecting scheme=jmx: script running failed (exited with code 1). 12-04-2014 16:08:02.884 +0000 ERROR ModularInputs - Unable to initialize modular input "jmx" defined inside the app "jmx_ta":

Introspecting scheme=jmx: script running failed (exited with code 1).

Question - 24:

How to connect to multiple jmx instances using Splunk for JMX?

Ans:

Install Splunk 6 on your server which contains about 6 different JMX instances. you want to hook all of them up into our Splunk JMX plugin. It is as easy as editing the config.xml file and adding a new jmx server host? Currently this is: <jmxserver host="[[system name]]" jvmDescription="common_raw" jmxport="53632">

Question - 25:

What is Managed Bean or MBean?

Ans:

A managed bean - sometimes simply referred to as an MBean - is a type of JavaBean, created with dependency injection. Managed Beans are particularly used in the Java Management Extensions technology. But, with the Java EE 6 specification provides for a more detailed meaning of a managed bean.

View All Answers

Question - 26:

What is JMX architecture?

Ans

JMX is based on a 3-level architecture:

- * The Probe level contains the probes (called MBeans) instrumenting the resources. Also called the Instrumentation level.
- * The Agent level, or MBeanServer, is the core of JMX. It is an intermediary between the MBean and the applications.
- * The Remote Management level enables remote applications to access the MBeanServer through Connectors and Adaptors. A connector provides full remote access to the MBeanServer API using various communication frameworks (RMI, IIOP, JMS, WS), while an adaptor adapts the API to another protocol (SNMP) or to Web-based GUI (HTML/HTTP, WML/HTTP).

Question - 27:

Which is the best tool for monitoring Weblogic server(WLS8)?

Ans:

WLS8 supports JMX but it uses weblogic implementation of JMX server. It does not supports generalise sun javax API which can be used with any JVM. There are some patches available which can be used with WLS8 which will enabled JMX based monitoring. Once JMX is enable there are many monitoring tools available in the market. One can even go for custom JMX utilities which can be used for server monitoring.

Question - 28:

what is the use of Object Factories?

Ans:

Factory methods that will be used to create objects just like in a static way.

View All Answers

Question - 29:

Explain JMX Concepts and Architecture?

Ans:

MX is conceptually simple, yet bears the fruit of years of domain experience and research. In a nutshell, JMX defines a standard means for applications to expose management functionality

1)Instrumentation level

2)Agent level

3)Management level

Question - 30:

What is JMX?

dvs.
ms ano JMX is native to the Java programming language. As a result, it offers natural, efficient, and lightweight management extensions to Java-based functions. It consists of a set of specifications and development tools for managing Java environments and developing state-of-the-art management solutions for applications and services.
