SharePoint Developer Interview Questions And Answers Guide.

Question - 1:

Explain me what is new with Visual WebPart in SharePoint 2013?

Ans:

A new Visual WebPart Template has been added to Visual Studio 2012 for Creating Visual Webparts for SharePoint 2013. In this new Template both the User Control and WebPart Classes are merged to Create one template unlike SharePoint 2010 where you had a separate ascx and webpart file. Also, now you can Create both Sandbox and Farm solutions using Visual WebPart Template.

Tell me which are default master pages in Sharepoint 2010?

Ans:

- * 1. v4.master - This is default master page.
- * 2. default.master - this is used to support the 2007 user interface
- * 3. minimal.master
- * 4. simple.master- it is used for accessdenied.aspx, confirmation.aspx, error.aspx, login.aspx, reqacc.aspx, signout.aspx & webdeleted.aspx pages.

[View All Answers](#)

Question - 30:

Tell us can we turn off Social - Follow & Site Feed in SharePoint 2013?

Ans:

Yes. You Can de-activate Follow & Social by disabling "Following Content feature" and "Site Feeds feature" on the Team site(in the written Order). By default, the Site feed feature on a team site is enabled.

[View All Answers](#)

Question - 31:

Tell me how to use Fabulous 40 templates in SharePoint 2013?

Ans:

As per MSDN, Microsoft is not Creating any New Versions of these Templates. The old Sites based on these templates Can be upgraded only if the Templates are Installed successfully in SharePoint 2013. You can try installing wsp of Fab 40 with ComptabilityLevel as 15 and upgrade the existing site collections.

[View All Answers](#)

Question - 32:

Tell me what is the new IFrames support in SharePoint 2013?

Ans:

SharePoint 2013 was added with the new Out-of-Box Support for IFrames. Admins can now embed dynamic content from other sites, such youtube videos or maps to any SharePoint site by using IFrames. Admins would need to add the Domain for the external site in "HTML Field Security" first.

[View All Answers](#)

Question - 33:

Do you know what is Shredded Storage?

Ans:

With Shredded Storage feature enabled, every document and the Changes made to the document, is stored in SQL as multiple "Shredded BLOBS". Whenever a new Version of a document is Created, only the BLOBs of the document that Corresponds to the Change are saved as opposed to the entire document as a new version. This feature helps to lower down the amount of storage required for saving files.

[View All Answers](#)

Question - 34:

Please explain what is Distributed Cache Service?

Ans:

The Distributed Cache service provides caching features in SharePoint Server 2013. The microblog features and feeds rely on the Distributed Cache to store data for very fast retrieval across all entities. The Distributed Cache service is built on Windows Server AppFabric, which implements the AppFabric Caching service. Windows Server AppFabric installs with the prerequisites for SharePoint Server 2013.

[View All Answers](#)

Question - 35:

Explain me what are Master Pages in SharePoint?

Ans:

Master Pages in SharePoint serves the same purpose as that of ASP.NET Master Pages. Certain parts of a web page normally remains same like header, footer or navigation bar etc. So, We create Master Pages with these common parts in order to achive a consistent look and feel for a SharePoint Site.

Using Master pages provides lots of benefits including:

- * Common Controls in one location only
- * Writing less Code and Centralized Updating
- * Better User Experience
- * Flexibility
- * Easier management of SharePoint Sites

Important Note:

- * A SharePoint Farm can have one or more Web Application(s).
- * A SharePoint Web Application can have one or more Site Collection(s).
- * A SharePoint Site Collection can have one or more Site(s).
- * A SharePoint Site can have one or more List(s).
- * A SharePoint List can have one or more List Item(s).

[View All Answers](#)

Question - 36:

Tell me how the WSS3.0 basic installation differs from the advanced installation?

Ans:

1. When we choose the basic installation, Windows Internal Database(WID), a relational database based on SQL server technology, is installed for the WSS3.0 databases. This WID has only 4 GB limitations. While if we go for advanced search, WSS 3.0 uses installed SQL server for the databases.
2. When we use basic installation, application pool uses the LocalSystem account.
3. Also once we go for Basic installation, we are unable to add more servers to the farm.

[View All Answers](#)

Question - 37:

Do you know why we use the properties.current.web instead of SPContext.Current.web in event receiver?

Ans:

When we deploy project from Visual studio then we can use the SPContext.Current.web but when we use the powershell to activate or deactivate the feature then we have to use properties.current.web beacuse there is no access of browser here.

[View All Answers](#)

Question - 38:

Do you know what is a web part?

Ans:

Web parts consist of xml queries to full SharePoint lists or document libraries. You can also develop your own web parts and web part pages.

[View All Answers](#)

Question - 39:

Explain me how do you Force a Solution to be Deployed to 15 Hive and not 14 Hive?

Ans:

If the solution was Created in Visual Studio 2010, you would add SharePointVersion="15.0" attribute in Solution's manifest.xml file to force it to deploy in 15 Hive instead of 14 Hive. If the Solution however is Created in Visual Studio 2012, you don't need to do anything, it gets deployed to 15 Hive by default.

[View All Answers](#)

Question - 40:

Explain me what is Cross-Site Publishing?

Ans:

Cross-Site Publishing is a new Feature in SharePoint Server 2013 that enables you to reuse content across site collections,web applications, and farms.You can use cross-site publishing to Create branded Internet, intranet and extranet publishing sites.

[View All Answers](#)

Question - 41:

Explain me how does Backward Compatibility works in SharePoint 2013?

Ans:

In SharePoint 2013 with the new "CompatabilityLevel" parameter of Install -SPSolution cmdlet you can now deploy your .wsp or Solution to either 14 hive or 15 hive or both.

[View All Answers](#)

Question - 42:

Do you know what is Minimal Download Strategy?

Ans:

Minimal Download Strategy in SharePoint 2013 improves rendering performance when browsing content where large parts of the page do not change providing a more fluid navigation experience. For example when navigating between a site's home page and Shared Documents page only the Content that has changed between the source and destination page (controls and placeholders in the content area) are downloaded and Url subsequently updated where the chrome is persisted.

Question - 50:

Tell us how does SharePoint 2013 Improve Performance?

Ans:

SharePoint 2013 Introduces Minimal Download Strategy and Distributed Cache Service to Improve Page Load; and Shredded Storage to Improve Storage required for saving files.

[View All Answers](#)

Question - 51:

Tell me whats are the new Delegate Controls in SharePoint 2013?

Ans:

In SharePoint 2013, three New Delegate Controls have been Introduced for the purpose of displaying the new Top Suite bar (with links SkyDrive, NewsFeed,Sync,Follow). These Controls are -

* SuiteBarBrandingDelegate delegate Control

* SuiteLinksDelegate delegate Control

* PromotedActions Delegate Control

[View All Answers](#)

Question - 52:

Tell us what are the types of input forms that can be created for a workflow?

Ans:

You can create four different types of input forms including

* An association form

* An initiation form

* A modification form

* A task edit form.

[View All Answers](#)

Question - 53:

Explain me what is SharePoint Delegate Control?

Ans:

* a. With the help of delegate control, we can take any OOB control of SharePoint and replace with our custom control without any modification in the SharePoint page. So that new custom control overrides the existing one.

- * b. So the delegate control provide one of the option to add control (either server control or user control) on a SharePoint page.
- * c. This is one of the important features of SharePoint, introduced in WSS v3 and so in MOSS 2007.
- * d. For example : In master page SearchBox control is included as
- * `<SharePoint:DelegateControl runat="server" ControlId="SmallSearchInputBox" />`
- * e. The above lines instantiate the delegate control object.
- * f. This delegate control object uses features to locate the control which is specified in ControlId. So there must be the features (it includes feature at any scope) which creates and deploys the SmallSearchInputBox control.

[View All Answers](#)

Question - 54:

Tell me what specific features Improve Performance in SharePoint 2013? Kindly elaborate?

Ans:

SharePoint 2013 introduces following features that improves performance significantly.

- * Distributed Cache Service
- * Minimal Download Strategy and
- * Shredded Storage by introducing Shredded BLOBs.

[View All Answers](#)

Question - 55:

Tell me what are zones?

Ans:

Different logical paths (URLs meaning) of gaining access to the same SharePoint Web application.

Five Zones :

- * Internet Zone.
- * Intranet.
- * Default.
- * Extranet.
- * Custom

Question - 56:

Explain me why should a Company Migrate to SharePoint 2013?

Ans:

Microsoft has added some Incredible features to SharePoint 2013 that can be of huge benefit to all the Companies that use SharePoint on a large scale. Most of the new Features are Introduced for Improving SharePoint Performance (for both Browser and SQL) and to enhance the famous Web Content Management Capabilities.

[View All Answers](#)

Question - 57:

Explain me how does Shredded Storage Work?

Ans:

Every Document in SharePoint 2013 is now stored as multiple "shredded BLOBs" in the new "DocStreams" data table. Whenever a new Version of a document is created, a new Record is written in this data table that contains only the "Shred BLOB" of the original document that corresponds to the Change, merged with the new Changes. In other words a new Blob with Changes is added as a new row in the table. Each BLOB that gets added Contains a numerical Id that represents the source BLOB. At the end it is the job of BLOB Index to keep the track of Blobs and to create a full file with the Combination of entries that point to the unchanged shreds of the previous version(s) and the entries that point to the newly added Changed shreds.

[View All Answers](#)

Question - 58:

Explain me how does the new Video Content type work in SharePoint 2013?

Ans:

Video Content type added to SharePoint 2013 is a very useful addition for Content Authors. The Improved Asserts Library provides support for Video Content Types and provides various Out-of-Box views like "Thumbnails" and Out-of-Box pages like "Video Page" to View Videos in a very Interactive way.

Videos in SharePoint 2013 are Organized in a manner similar to "document sets". SharePoint Creates a stub (think of it as a folder) to hold a video and all the related contents, such as user-defined properties, thumbnails, video renditions, and other documents related to the video. You can use the Video Content Type in Asserts Library properties.

[View All Answers](#)

Question - 59:

Tell me what is new with Development in SharePoint 2013?

Ans:

Apart from the new App Model for Creating Custom Components, Microsoft has added a few new Namespaces to work with newly added - Social, Event Receivers, Delegate Controls, Callout Popups and other Custom Components in SharePoint 2013. In addition to these classes a few new templates in Visual Studio 2012 has also been added to Create better solutions.

[View All Answers](#)

Question - 60:

Tell us what is the new TilesViewWebPart in SharePoint 2013?

**Ans:**

SharePoint 2013 Introduces a new "Getting Started" WebPart that has "Tiles" to provide an easy access to some of the main links in the Site like - adding lists/libraries, Creating masterpage etc. To Programmatically Create this new WebPart a new abstract base class TilesViewWebPart has been added in SharePoint API. You have to Create a Custom Webpart and Inherit from TilesViewWebpart and Override GetTiles() to Create Custom tiles.

Question - 61:

Please explain how would you a Migrate a Site Collection in SharePoint 2013?

Ans:

- * Backup and Restore SharePoint 2010 Content database in your SharePoint 2013 farm.
- * Run Test-SPContentDatabase cmdlet to identify missing Components along with potential errors and related warnings. Check the upgrade log and deploy any missing components and re-run the cmdlet to verify.
- * Attach the Content database to the desired web application using Mount-SPContentDatabase cmdlet.
- * After successfully mounting the content database to web application, the site should be accessible in 14 mode.
- * Next, to Upgrade the site to 15 Hive, Navigate to SiteUpgrade.aspx page in Site Setting of your site collection.
- * Click on "Upgrade the Site Collection" button.
- * During the upgrade The SiteUpgrade.aspx page shows the progress and provides a link to an upgrade log for troubleshooting purposes.
- * Site Collection Should now be accessible in 15 mode.

[View All Answers](#)

Question - 62:

Please explain me what are the advantages of SharePoint Portal Services (SPS) over SharePoint Team Services (STS)?

Ans:

SharePoint Portal Services (SPS) has MUCH better document management. It has check-in, check-out, versioning, approval, publishing, subscriptions, categories, etc. STS does not have these features, or they are very scaled back. SharePoint Portal Services (SPS) has a better search engine, and can crawl multiple content sources. STS cannot. STS is easier to manage and much better for a team environment where there is not much Document Management going on. SPS is better for an organization, or where Document Management is crucial.

Question - 63:

Tell us what is the difference between CustomMasterUrl & MasterUrl?

Ans:

MasterUrl is used to change the layout of all use end pages but CustomMasterUrl is for changing the layout of admin side pages.

[View All Answers](#)

Question - 64:

Explain me what is LINQ. How is it used in Sharepoint?

Ans:

LINQ is a feature of the programming languages C# 3.0 and Visual Basic .NET. LINQ allows the user to query in an object-oriented way, supports compile-time check, gives the user intellisense support in Visual Studio and defines a unified, SQL like syntax to query any data source. But unlike other languages and query syntaxes which vary from one type of data source to another, LINQ can be used to query, in principle, any data source whatsoever. Hence, developers may find that it is the only query syntax that they ever need to know. It is commonly used to query objects collections, XML and SQL server data sources.

LINQ to SharePoint is officially being supported with the 2010 release. It works similar to LINQ to SQL or LINQ to Entity.

The LINQ to SharePoint Provider is defined in the Microsoft.SharePoint.Linq namespace. It translates LINQ queries into Collaborative Application Markup Language (CAML) queries. The gateway class for the LINQ to SharePoint provider is Microsoft.SharePoint.Linq.DataContext which represents the data of a SharePoint Foundation Web site

Question - 66:

Tell me what is the new "SPField.JSLink" property used for?

**Ans:**

New "SPField.JSLink" property has been added to help specify any external JavaScript file Containing any Rendering logic for Out-of-Box or Custom field type. With JSLink developers can now Control the Rendering (the presentation and validation) of any Field (Custom or Out-of-box) on List forms as well as in Views by simply adding a reference to an External or deployed JavaScript file.

[View All Answers](#)

Question - 67:

Tell us why Would you Recommend Re-Creating Solutions?

Ans:

SharePoint 2013 provides Support for both 14 Hive and 15 Hive. Both the directories are Created by default. So if you deploy a SharePoint 2010 Solution that refers to say _layouts folder, the reference will be made to 14 Hive and not 15 Hive by default. To make the solution refer to 15 Hive's _layouts folder you need to Re-Create the Solution in Visual Studio 2012 and fix the _layouts reference to add '15' into it.

e.g.

14 Hive - _layouts/custompage.aspx

15 Hive - _layouts/15/custompage.aspx

Question - 71:

Do you know what is Sandbox solution?

Ans:

When user writing custom code then it is not trusted, its failure causes on entire site. So the sandbox solution concept is used. In that case program is only written for particular site & solution is uploaded in the same site. The solution size limit is decided at the time of site creation & if size increases or code showing bad performance then it is easy to administrator to stop the working of solution.

Question - 75:

Do you know are there any Changes to Solutions deployed in bin directory and GAC in SharePoint 2013?

Ans:

You can no longer add partial trust Solution Packages to the bin directory. Any files deployed to the bin directory must be full trust. Any deployment scripts needs to be updated to make sure that they specify the correct trust level. After the release of .NET Framework 4.0, the GAC was split into two, one for each CLR. c:\windowsassembly is the location for .NET versions 1.0 through 3.5 and c:\windowsmicrosoft.netassembly is location for all the dlls for project Created in .NET Framework 4.0.

Question - 80:

Do you know what is the Licensing Model for SharePoint 2013?

Ans:

With SharePoint 2013 Microsoft has Introduced User License Enforcement Capabilities - that means different licenses can be assigned to different users based on Active Directory security groups that are added in. A group of admins for example would need features that are offered by Enterprise license but a group end users on the other hand can work with Standard license and would not need to pay more. By default the User License Enforcement is disabled and must first be enabled to begin assigning, using, and implementing user licensing capabilities.
