About Interview Questions Answers

Interview Questions Answers . ORG is an interview preparation guide of thousands of Job Interview Questions And Answers, Job Interviews are always stressful even for job seekers who have gone on countless interviews. The best way to reduce the stress is to be prepared for your job interview. Take the time to review the standard interview questions you will most likely be asked. These interview questions and answers on Distributed Processing will help you strengthen your technical skills, prepare for the interviews and quickly revise the concepts.

If you find any **question or answer** is incorrect or incomplete then you can **submit your question or answer** directly with out any registration or login at our website. You just need to visit [Distributed Processing Interview Questions And Answers](#) to add your answer click on the *Submit Your Answer* links on the website; with each question to post your answer, if you want to ask any question then you will have a link *Submit Your Question*; that's will add your question in Distributed Processing category. To ensure quality, each submission is checked by our team, before it becomes live. This [Distributed Processing Interview preparation PDF](#) was generated at **Wednesday 29th November, 2023**

Distributed Processing Interview Questions And Answers Guide.

Question - 1:

What is Oracle Distributed database?

Ans:

A distributed database is a network of databases managed by multiple database servers that appears to a user as single logical database. The data of all databases in the distributed database can be simultaneously accessed and modified.

Question - 2:

When will the data in the oracle snapshot log be used?

Ans:

We must be able to create a after row trigger on table (i.e., it should be not be already available) After giving table privileges.

We cannot specify snapshot log name because oracle uses the name of the master table in the name of the database objects that support its snapshot log. The master table name should be less than or equal to 23 characters. (The table name created will be MLOGS_tablename, and trigger name will be TLOGS name).

Question - 3:

What are the options available to refresh Oracle snapshots?

Ans:

COMPLETE - Tables are completely regenerated using the snapshots query and the master tables every time the snapshot referenced.

FAST - If simple snapshot used then a snapshot log can be used to send the changes to the snapshot tables.

FORCE - Default value. If possible it performs a FAST refresh; Otherwise it will perform a complete refresh.

Question - 5:

How can we reduce the network traffic in Distributed Processing?

Ans:

* Replication of data in distributed environment.

* Using snapshots to replicate data.

* Using remote procedure calls.

Question - 6:

What is Oracle Two-Phase Commit?

Ans:

Two-phase commit is mechanism that guarantees a distributed transaction either commits on all involved nodes or rolls back on all involved nodes to maintain data consistency across the global distributed database. It has two phase, a Prepare Phase and a Commit Phase.

**Question - 7:**

What is an oracle snapshot log?

Ans:

It is a table that maintains a record of modifications to the master table in a snapshot. It is stored in the same database as master table and is only available for simple snapshots. It should be created before creating snapshots.

Question - 8:

How can you Enforce Referential Integrity in oracle snapshots?

Ans:

Time the references to occur when master tables are not in use.

Perform the reference the manually immediately locking the master tables. We can join tables in snapshots by creating a complex snapshots that will based on the master tables.

Question - 9:

Differentiate simple and complex, oracle snapshots?

Ans:

* A simple snapshot is based on a query that does not contains GROUP BY clauses, CONNECT BY clauses, JOINS, sub-query or snapshot of operations.

* A complex snapshots contain atleast any one of the above.

Question - 10:

What is an Oracle SQL * NET?

Ans:

SQL *NET is ORACLEs mechanism for interfacing with the communication protocols used by the networks that facilitate distributed processing and distributed databases. It is used in Clint-Server and Server-Server communications.

Question - 11:

What is an oracle SNAPSHOT?

Ans:

Snapshots are read-only copies of a master table located on a remote node which is periodically refreshed to reflect changes made to the master table.

Question - 12:

Describe two phases of Oracle Two-phase commit?

Ans:

Prepare phase - The global coordinator (initiating node) ask a participants to prepare (to promise to commit or rollback the transaction, even if there is a failure)

Commit - Phase - If all participants respond to the coordinator that they are prepared, the coordinator asks all nodes to commit the transaction, if all participants cannot prepare, the coordinator asks all nodes to roll back the transaction.
