E4X Interview Questions And Answers Guide.

Question - 1:

How you define E4X?

Ans:

E4X stands for ECMAScript(European Computer Manufactures Association) for XML(eXtensible Markup Language).We can called as E4X is an programing language extensionn used to adds the ECMAScript(like: ActionScript,DMDScript,E4X, JavaScript,JScript) to XML.

1. Real life meaning of E4X is "JavaScript for XML".
2. E4X is an official JavaScript standard used to add direct support for XML.
3. Using E4X we can easily make scripting for XML with JavaScript.
4. Using E4X we can declare an XML object variable as same as declare Date and Array variable.

Example:

```
var p = new XML()
var q = new Date()
var r = new Array()
```

Question - 2:

How we say JavaScript as same as ECMAScript?

Ans:

Because of some reasons we can say that JavaScript is same as ECMAScript.

- 1.ECMAScript is called as an official name for JavaScript.
- 2.ECMAScript is exactly same as JavaScript.
- 3.JavaScript is standardize by ECMA (The European Computer Manufacturers Association) organization.

[View All Answers](#)

Question - 3:

What you understand about ECMA?

Ans:

ECMA(The European Computer Manufacturers Association)international was founded in 1961.

ECMA is an organization made to standardization of information and Communication Technology(ICT) and Consumer Electronics(CE).

We use ECMA standard with

- 1.JavaScript
- 2.C# Language
- 3.International Character Sets
- 4.Optical Disks
- 5.Magnetic Tapes
- 6.Data Compression
- 7.Data Communication etc.

ECMA-262(Javascript1.3)was standarize in Dec1999.

ECMA-357 (E4X) was standardized in June2004.

We use E4X to make JavaScript supported with XML.

Question - 4:

Tell me how can we use E4X in Mozilla and Mozilla Based browsers?

Ans:

To make use E4X with Mozilla and Mozilla based browsers (like: Netscape) we used Spidermonkey JavaScript engine. It has been extended to implement E4X but presently we can only use it in nightly trunk builds. The present releases Mozilla 1.7 suite, Firefox 1.0, Netscape 7.2 does not supported E4X.

[View All Answers](#)

Question - 5:

Using E4X how can we define XML document as a JavaScript object?

Ans:

I have given you example to show XML document as JavaScript object. Example:
I have you simple XML document.

```
<message>
<date>2009-26-01</date>
<to>Abhi</to>
<from>Sud</from>
<heading>Don't forget</heading>
<body>Happy Birthday!</body>
</message>
```

We can store this XML document in a string called as message into an XML object variable using JavaScript. `var v = new XML(message)` 'or'
Assign the XML text to the XML object variable directly. `var v = new XML()v=<message>`

```
<date>2009-26-01</date>
<to>Abhi</to>
<from>Sud</from>
<heading>Don't forget</heading>
<body>Happy Birthday!</body>
</message>
```

We can use JavaScript like that, `document.write(v.from)`

Output: Sud

Question - 6:

Using E4X how can we make XML easier to use?

Ans:

E4X makes easier to use JavaScript to parse and manipulate XML. This is also used to enable XML library or component to act with XML. On different browsers libraries and components perform with different syntax and work differently. I have given you example where I show how to load an existing XML document ("message.xml") into XML parser and to show note from message. Example: Without use of E4X. `var xmlDoc//This code is made only for Internet Explorer.if (window.ActiveXObject){xmlDoc = new ActiveXObject("Microsoft.XMLDOM")xmlDoc.async=false;xmlDoc.load("message.xml")displaymessage()}//`
This code is made for Mozilla, Firefox etc. else (document.implementation

Question - 7:

Tell me about browser compatibility with E4X?

Ans:

E4X supports limited browsers. No mainstream browser has supported by E4X.

Mozilla engine (1.8) (beta version) is limited support to E4X.

We can say that Firefox 1.1 is an first version that supports E4X. E4X is also expected to the future version of Internet Explorer.

Firefox 1.1: Firefox 1.1 can support best for E4X as compare to other browsers.

Question - 8:

How to use of E4X with XML?

Ans:

Using E4X we can easily use JavaScript with an XML.

Example:

I have written an XML document.

```
<order>
<date>2009-26-01</date>
<customer>
  <firstname>Porus</firstname>
  <lastname>Jain</lastname>
</customer>
<item>
  <name>Milk</name>
  <qty>4</qty>
  <price>100.00</price>
</item>
</order>
```

We can store this XML document as a string in variable order.

```
var order = new XML(txt)
'or'
```

Assign the XML text to the XML object variable directly.

```
var order = new XML()
order=<order id="010">
<date>2009-26-01</date>
<customer>
  <firstname>Porus</firstname>
  <lastname>Jain</lastname>
</customer>
<item>
  <name>Milk</name>
  <qty>4</qty>
  <price>100.00</price>
</item>
```

</order>

We can also calculate the price like that,

```
var total=order.item.qty * order.item.price
```

Can we display the customers full name like that,

```
document.write(order.customer.lastname)
```

```
document.write(",")
```

```
document.write(order.customer.firstname)
```

Can add new items like that,

```
order.item+=
```

```
<item>
```

```
<name>Bread</name>
```

```
<qty>5</qty>
```

```
<price>70.00</price>
```

```
</item>
```

We can display the order id like that,

```
document.write(order.@id)
```

We can calculate the total price, when the order has many items like that,

```
var price=0
```

```
for each (i in order.item)
```

```
{
```

```
    price+= i.qty*i.price
```

```
}
```
