## DHTML Interview Questions And Answers Guide.

### Question - 1:

Tell me about technologies that we use in DHTML?

#### Ans:

Some technologies that we used in DHTML are given below:

1. JavaScript
2. HTML DOM
3. HTML EVENT
4. CSS

1. JavaScript: It is a standard of scripting for HTML. Using JavaScript DHTML can control, access and manipulate HTML elements.

2. HTML DOM: It is a Document Object Model which is a W3C Standard for HTML. Using HTML DOM is used to define standard to set of objects and to access and manipulate them for HTML. Using HTML DOM, DHTML can access and manipulate HTML elements.

3. HTML Events: It is a part of HTML DOM and used to handle HTML elements. We use DHTML with HTML Events to make web pages those perform action when event occurs.

4. CSS: It is a W3C standard style and layout model made only for HTML.

DHTML uses JavaScript and DOM to change position and style of HTML elements.

### Question - 3:

What are the attributes that make up a DHTML?

#### Ans:

DHTML is called as Dynamic HTML. This is used to increase the interactive ability and the visual effect of the web pages which is loaded in the browser. The main technologies that are used in DHTML are namely:

- \* HTML
- \* JavaScript
- \* CSS which is also called as Cascading Style Sheet
- \* DOM also called as Document Object Model

### Question - 4:

How DHTML work with JavaScript?

#### Ans:

Using JavaScript we can make dynamic HTML content.

We can use `document.write()` to show dynamic content on your web page. Below I have given you HTML page which made dynamic after using JavaScript. This example will show current date.

Example:

```
<html>
<body>
<script type="text/javascript">
document.write(Date());
</script>
</body>
</html>
```

**Question - 7:**

How to Handle Events with DHTML?

**Ans:**

Event is use to trigger actions in the browser. When client click on the element, associated action will started.Like: an JavaScript will started when client click on element.

Using Event Handler we can do like that,When an event occur it will execute code associated with that element.

Example:

In this example header will changes when client clicks.

```
<h1 onclick="this.innerHTML='abc!'">Click on this text</h1>
```

We can add a script in the head section and then we call the function from the event handler.

Example:

```
<html>
<head>
<script type="text/javascript">
function changetext(id)
{
id.innerHTML="abc!";
}
</script>
</head>
<body>
<h1 onclick="changetext(this)">Click on this text</h1>
</body>
</html>
```

**Question - 8:**

What is the difference between DHTML and HTML?

**Ans:**

Some main difference b/w DHTML(Dynamic HTML) and HTML(Hyper Text Markup Language)are given below.

\* Using DHTML we can use JavaScript and style sheets in our HTML page.

\* Using DHTML we can insert small animations and dynamic menus into our HTML page.

\* If use want that your web page display your DHTML effects(object or word can highlighted, larger,a different color etc) than you have to save your web page with .dhtml extension except .html or .htm .

**Question - 10:**

What is DHTML?

**Ans:**

Defination of DHTML according to W3c(World Wide Web Consortium) is:

"Dynamic HTML is a term used by some vendors to describe the combination of HTML, style sheets and scripts that allows documents to be animated."

DHTML stands for Dynamic HTML.DHTML is not an language. Using DHTML we can use DOM, CSS , JavaScript and HTML together.

We use DHTML to make the web pages dynamic and interactive.
