About Interview Questions Answers

Interview Questions Answers . ORG is an interview preparation guide of thousands of Job Interview Questions And Answers, Job Interviews are always stressful even for job seekers who have gone on countless interviews. The best way to reduce the stress is to be prepared for your job interview. Take the time to review the standard interview questions you will most likely be asked. These interview questions and answers on Network will help you strengthen your technical skills, prepare for the interviews and quickly revise the concepts.

If you find any **question or answer** is incorrect or incomplete then you can **submit your question or answer** directly with out any registration or login at our website. You just need to visit [Network Interview Questions And Answers](#) to add your answer click on the *Submit Your Answer* links on the website; with each question to post your answer, if you want to ask any question then you will have a link *Submit Your Question*; that's will add your question in Network category. To ensure quality, each submission is checked by our team, before it becomes live. This [Network Interview preparation PDF](#) was generated at **Wednesday 29th November, 2023**

Network Interview Questions And Answers Guide.

Question - 1:

Explain What are Service-specific middleware?

Ans:

It is needed to accomplish a particular Client/Server type of services which includes:-

- * Database specific middleware
- * OLTP specific middleware
- * Groupware specific middleware
- * Object specific middleware
- * Internet specific middleware and
- * System management specific middleware.

Question - 3:

Explain What are TP-Lite and TP-Heavy Monitors?

Ans:

TP-Lite is simply the integration of TP Monitor functions in the database engines. TP-Heavy are TP Monitors which supports the Client/Server architecture and allow PC to initiate some very complex multiserver transaction from the desktop.

Question - 5:

Explain What are Triggers and Rules?

Ans:

Triggers are special user defined actions usually in the form of stored procedures, that are automatically invoked by the server based on data related events. It can perform complex actions and can use the full power of procedural languages.

A rule is a special type of trigger that is used to perform simple checks on data.

Question - 6:

Explain What are the types of Transparencies?

Ans:

The types of transparencies the NOS middleware is expected to provide are:-

- * Location transparency
- * Namespace transparency
- * Logon transparency
- * Replication transparency

- * Local/Remote access transparency
- * Distributed time transparency
- * Failure transparency and
- * Administration transparency.

Question - 7:

Explain What is meant by Asymmetrical protocols?

Ans:

There is a many-to-one relationship between clients and server. Clients always initiate the dialog by requesting a service. Servers are passively awaiting for requests from clients.

Question - 8:

Explain meant by 3-Tier architecture?

Ans:

In 3-tier Client/Server systems, the application logic (or process) lives in the middle tier and it is separated from the data and the user interface. In theory, the 3-tier Client/Server systems are more scalable, robust and flexible.

Example: TP monitor, Web.

Question - 9:

What is building blocks of Client/Server?

Ans:

The client side building block runs the client side of the application.

The server side building block runs the server side of the application.

Question - 10:

Explain What are called Fat clients and Fat servers?

Ans:

If the bulk of the application runs on the Client side, then it is Fat clients. It is used for decision support and personal software.

If the bulk of the application runs on the Server side, then it is Fat servers. It tries to minimize network interchanges by creating more abstract levels of services.

Question - 13:

Explain a Database Server?

Ans:

With a database server, the client passes SQL requests as messages to the database server. The results of each SQL command are returned over the network. The server uses its own processing power to find the request data instead of passing all the records back to the client and then getting it find its own data. The result is a much more efficient use of distributed processing power. It is also known as SQL engine.
