Computational Fluid Dynamics
Job Interview Questions And Answers

Interview Questions Answers
http://interviewquestionsanswers.org/
Interview Questions Answers . ORG is an interview preparation guide of thousands of Job Interview Questions And Answers, Job Interviews are always stressful even for job seekers who have gone on countless interviews. The best way to reduce the stress is to be prepared for your job interview. Take the time to review the standard interview questions you will most likely be asked. These interview questions and answers on Computational Fluid Dynamics will help you strengthen your technical skills, prepare for the interviews and quickly revise the concepts.

If you find any question or answer is incorrect or incomplete then you can submit your question or answer directly with out any registration or login at our website. You just need to visit Computational Fluid Dynamics Interview Questions And Answers to add your answer click on the Submit Your Answer links on the website; with each question to post your answer, if you want to ask any question then you will have a link Submit Your Question; that's will add your question in Computational Fluid Dynamics category. To ensure quality, each submission is checked by our team, before it becomes live. This Computational Fluid Dynamics Interview preparation PDF was generated at Monday 27th March, 2017

You can follow us on FaceBook for latest Jobs, Updates and other interviews material. www.facebook.com/InterviewQuestionsAnswers.Org

Computational Fluid Dynamics Interview Questions And Answers Guide.

Question - 1:
How do you think your colleagues at your last job would describe you?

Ans:
While your CV will say a lot about your work history in Computational Fluid Dynamics, the interviewer will most likely look for greater detail with questions such as this. Be positive about previous experience, highlighting your own strengths.

Question - 2:
What did you dislike about your old job?

Ans:
Try to avoid any pin point, like never say “I did not like my manager or I did not like environment or I did not like team” Never use negative terminology. Try to keep focus on every thing was good in Computational Fluid Dynamics, I just wanted to make change for proper growth.

Question - 3:
What do you think about Teamwork?

Ans:
I enjoy teamwork and am used to shift work. I think I would adapt well to the role. I am looking for new challenges in Computational Fluid Dynamics and I know I would learn a lot as cabin crew, not just about people and places, but skills like first aid too, how can I help others with in my limits.

Question - 4:
Have you ever been caught stealing, or better yet, have you ever stole anything?

Ans:
I guess everyone takes a pen or paper or little things like that. But other than that, NO. I have never stole from my employers or better yet in Computational Fluid Dynamics, from anyone.

Question - 5:
What have you done to improve your knowledge in Computational Fluid Dynamics in the last year?

Ans:
Try to include improvement activities that relate to the job in Computational Fluid Dynamics. A wide variety of activities can be mentioned as positive self-improvement. Have some good ones handy to mention.

Question - 6:
What critical component of this position in Computational Fluid Dynamics makes the work challenging?

Ans:
Heading information: This should include job title, pay grade or range, reporting relationship (by position, not individual), hours or shifts, and the likelihood of overtime or weekend work.
Summary objective of the job: List the general responsibilities and descriptions of key tasks and their purpose, relationships with customers, coworkers, and others, and the results expected of incumbent employees.
Qualifications: State the education, experience, training, and technical skills necessary for entry into this job. Special demands: This should include any extraordinary conditions applicable to the job in Computational Fluid Dynamics (for example, heavy lifting, exposure to...
temperature extremes, prolonged standing, or travel).

Job duties and responsibilities: Only two features of job responsibility are important: identifying tasks that comprise about 90 to 95 percent of the work done and listing tasks in order of the time consumed (or, sometimes, in order of importance).

**Question - 7:**
What are your strengths In Computational Fluid Dynamics?

**Ans:**
This is one of the most common questions you will be asked. Give an answer relevant to the skills and qualities relevant to the position you are applying to. The interviewer is trying to find if your strengths match the job. For example, if you are applying for a job In Computational Fluid Dynamics where accuracy is an important issue, one of your strengths could be that you have an eye for detail. It may useful to find different words to describe similar attributes and qualities in order to avoid repetition.

**Question - 8:**
Do you work well within a team?

**Ans:**
Some people are thrown when they are asked this Computational Fluid Dynamics question when they are applying for a position to work alone. Every company works as a team, so you are a good team player, give an example of when you have worked well within a team.

**Question - 9:**
What can you offer me that another person can't?

**Ans:**
This is when you talk about your record of getting things done. Go into specifics from your resume and portfolio; show an employer your value and how you'd be an asset. You have to say, "I'm the best person for the job In Computational Fluid Dynamics. I know there are other candidates who could fill this position, but my passion for excellence sets me apart from the pack. I am committed to always producing the best results. For example..."

**Question - 10:**
What are you looking for in a new position In Computational Fluid Dynamics?

**Ans:**
I've been honing my skills In Computational Fluid Dynamics for a few years now and, first and foremost, I'm looking for a position where I can continue to exercise those skills. Ideally the same things that this position has to offer. Be specific.

**Question - 11:**
What is your biggest weakness In Computational Fluid Dynamics?

**Ans:**
No one likes to answer this question because it requires a very delicate balance. You simply can't lie and say you don't have one; you can't trick the interviewer by offering up a personal weakness In Computational Fluid Dynamics that is really a strength ("Sometimes, I work too much and don't maintain a work-life balance."); and you shouldn't be so honest that you throw yourself under the bus ("I'm not a morning person so I'm working on getting to the office on time.")

**Question - 12:**
How do you handle confidentiality in your work?

**Ans:**
Often, interviewers will ask questions to find out the level of technical knowledge In Computational Fluid Dynamics that a candidate has concerning the duties of a care assistant. In a question such as this, there is an opportunity to demonstrate professional knowledge and awareness. The confidentiality of a person's medical records is an important factor for a care assistant to bear in mind.

**Question - 13:**
What makes you right for this position?

**Ans:**
This question can be tricky because you need to show your worth In Computational Fluid Dynamics without sounding cocky or arrogant. Research the business ahead of time and become familiar with its mission and values. Take the time to figure out how your personal qualities fit the needs of the business and use that fit to provide your answer.

**Question - 14:**
Are you good at working in a team In Computational Fluid Dynamics?

**Ans:**
Before you answer, consider how you best contribute to a team:
* Do you get along easily with people?
* Are you an effective collaborator?
* Can you communicate with people from various backgrounds and with different personalities?
* Can you motivate people?
* Do you know how to push back tactfully?
* Can you mediate conflicts?
* Can you deal with difficult personalities?

Question - 15:
Tell me about yourself?

Ans:
There are some questions that your potential employer aren't allowed to ask (but trust me, they probably want to). For instance, they shouldn't really ask about your family or how far away you live from your potential place of employment. If you can find a way to answer these questions anyway (with the answers they want to hear), that will give them a little added info to help them make the (right) decision!

Question - 16:
Where do you see your career in five years In Computational Fluid Dynamics?

Ans:
I would like to retire from this company. I would like to make a difference in the company whether in the company or any other position or area of the company In Computational Fluid Dynamics.

Question - 17:
How did you handle meeting a tight deadline In Computational Fluid Dynamics?

Ans:
Review every deadline you need to meet. Prioritize your projects by deadline and factor in how important each project is. Record your deadlines on a digital calendar or spreadsheet.

Question - 18:
How do you think you might fit this position In Computational Fluid Dynamics?

Ans:
An important part of research before the interview is what the company does and how the job role relates to that. This includes the company philosophy and working methods. Questions such as this seek to find out how a candidate will fit into the organisation In Computational Fluid Dynamics. Answer positively; including practical examples of how you anticipate you would perform in the new role.

Question - 19:
Do you ever take work home with you?

Ans:
Here are two great sample answers that might help get you started:
* I am an extremely organized person, so I tend to be able to get my work done at work. However, if the need arose I would not be against taking work home. I try not to make it a habit, since I do value my free time. I do realize though that the work we do is important, and sometimes you have to do what needs to be done.
* I do not shy away from taking work home with me. I know that meeting deadlines and doing outstanding work sometimes means taking a bit of it home. I do not have a problem doing that when the need arises.

Question - 20:
Tell me about a time you failed?

Ans:
Everyone has failed, so don't play dumb or claim you've never messed up In Computational Fluid Dynamics. Think of a time when a work-related situation didn't turn out quite as you had hoped. An interviewer is interested in seeing how you took responsibility for your failure, what you learned from it, and how you would prevent similar failures from happening again.

Question - 21:
How would your boss and co-workers describe you?

Ans:
First of all, be honest (remember, if you get this job, the hiring manager will be calling your former bosses and co-workers!). Then, try to pull out strengths and traits you haven't discussed in other aspects of the interview In Computational Fluid Dynamics, such as your strong work ethic or your willingness to pitch in on other projects when needed.
Question - 22:
Tell me a difficult situation you have overcome in the workplace?

Ans:
Conflict resolution, problem solving, communication and coping under pressure are transferable skills desired by many employers in Computational Fluid Dynamics. Answering this question right can help you demonstrate all of these traits.
* Use real-life examples from your previous roles that you are comfortable explaining.
* Choose an example that demonstrates the role you played in resolving the situation clearly.
* Remain professional at all times - you need to demonstrate that you can keep a cool head and know how to communicate with people.

Question - 23:
Why do you want to join our company?

Ans:
This is a question that is aimed at finding out whether you know enough about the company and the basic market. The best way to answer this question is to do some research on the company and highlight its positive points.

Question - 24:
What makes a product successful?

Ans:
Basing on the monetization, these questions give you the chance to prove your personal try. Do not show extremely your optimism and pursue the unreality. Give your answers the reality.
It is useful to predict a five to ten-year scenario of expectations in order to gain your targets that you set up and it is the period of time to see how your plans and targets are performed.
Therefore, the quality of the product and marketability of the mentioned industry need to be highlighted. This will help you to achieve the interviewer's attention and insurance to you personality and you can get the honest and long-term goals.

Question - 25:
What challenges are you looking for in this position?

Ans:
A typical interview question to determine what you are looking for your in next job, and whether you would be a good fit for the position being hired for, is "What challenges are you looking for in a position in Computational Fluid Dynamics?" The best way to answer questions about the challenges you are seeking is to discuss how you would like to be able to effectively utilize your skills and experience if you were hired for the job. You can also mention that you are motivated by challenges, have the ability to effectively meet challenges, and have the flexibility and skills necessary to handle a challenging job. You can continue by describing specific examples of challenges you have met and goals you have achieved in the past.

Question - 26:
If you were an animal, which one would you want to be?

Ans:
Seemingly random personality-test type questions like these come up in interviews generally because hiring managers want to see how you can think on your feet. There's no wrong answer here, but you'll immediately gain bonus points if your answer helps you share your strengths or personality or connect with the hiring manager. Pro tip: Come up with a stalling tactic to buy yourself some thinking time, such as saying, "Now, that is a great question. I think I would have to say..."

Question - 27:
Do you like being around people?

Ans:
People skills are a necessity for medical assistants. When answering this question, be sure to show that you enjoy interacting and working with others and that you also derive great enjoyment from helping others. This will show that you are a team player and that you would be a valuable team member in Computational Fluid Dynamics.

Question - 28:
What do you like to do outside of work?

Ans:
Interviewers ask personal questions in an interview to "see if candidates will fit in with the culture [and] give them the opportunity to open up and display their personality, too." In other words, if someone asks about your hobbies outside of work, it's totally OK to open up and share what really makes you tick. (Do keep it semi-professional, though: Saying you like to have a few beers at the local hot spot on Saturday night is fine. Telling them that Monday is usually a rough day for you because you're always hungover is not.)

Question - 29:
What other companies are you interviewing with?
Computational Fluid Dynamics Interview Questions And Answers

Question - 30:
How do you deal with pressure or stressful situations?

Ans:
Choose an answer that shows that you can meet a stressful situation head-on in a productive, positive manner and let nothing stop you from accomplishing your goals. A great approach is to talk through your go-to stress-reduction tactics (making the world's greatest to-do list, stopping to take 10 deep breaths), and then share an example of a stressful situation you navigated with ease.

Question - 31:
How many tennis balls can you fit into a limousine? 1,000? 10,000? 100,000? Seriously?

Ans:
Well, seriously, you might get asked brainteaser questions like these, especially in quantitative jobs. But remember that the interviewer doesn't necessarily want an exact number—he wants to make sure that you understand what's being asked of you, and that you can set into motion a systematic and logical way to respond. So, just take a deep breath, and start thinking through the math. (Yes, it's OK to ask for a pen and paper!)

Question - 32:
Why were you fired?

Ans:
OK, if you get the admittedly much tougher follow-up question as to why you were let go (and the truth isn't exactly pretty), your best bet is to be honest (the job-seeking world is small, after all). But it doesn't have to be a deal-breaker. Share how you've grown and how you approach your job and life now as a result. If you can position the learning experience as an advantage for this next job, even better.

Question - 33:
Tell me an occasion when you needed to persuade someone to do something?

Ans:
Interpersonal relationships are a very important part of being a successful care assistant. This question is seeking a solid example of how you have used powers of persuasion to achieve a positive outcome in a professional task or situation. The answer should include specific details.

Question - 34:
Why should I hire you In Computational Fluid Dynamics?

Ans:
To close the deal on a job offer, you MUST be prepared with a concise summary of the top reasons to choose you. Even if your interviewer doesn't ask one of these questions in so many words, you should have an answer prepared and be looking for ways to communicate your top reasons throughout the interview process.

Question - 35:
How would you be an asset to us In Computational Fluid Dynamics?

Ans:
Think again about the job specification and the skills needed for this role In Computational Fluid Dynamics. Have a paragraph prepared highlighting how you will be able to do the job and what you can bring to the team. It goes without saying that this paragraph should be positive.

Question - 36:
How would you estimate the weight of the Chrysler building?

Ans:
This is a process guesstimate where the interviewer wants to know if you know what to ask. First, you would find out the dimensions of the building (height, weight, depth). This will allow you to determine the volume of the building. Does it taper at the top? (Yes.) Then, you need to estimate the composition of the Chrysler building. Is it mostly steel? Concrete? How much would those components weigh per square inch? Remember the extra step: find out whether you're considering the building totally empty or with office furniture, people, etc. If you're including the contents, you might have to add 20 percent or so to the building’s weight.

Question - 37:
Suppose there are three light switches outside a room. Inside is a single light bulb, controlled by one of the three switches. You need to determine which switch operates the bulb. You can turn the switches on and off as many times as you wish (they are all off to begin with), but may only enter the room once. There is no one

Copyright © http://InterviewQuestionsAnswers.org
there to help you. The door to the room is closed, and there are no windows, so you cannot see inside. How can you discover which switch operates the bulb?

**Ans:**

Do the following steps:

* 1. Turn ON two switches, and leave one OFF.
* 2. Wait a few minutes.
* 3. Turn one switch from ON to OFF. One is now ON and two are OFF
* 4. Enter the room. - If the light is ON, it is controlled by the switch you left ON. - If the light bulb is OFF, touch it. If it is warm it is controlled by the switch you turned ON and OFF. If it is cold, it is controlled by the switch you never turned on.

**Question - 38:**

Why are you leaving the present company?

**Ans:**

According to me we can not grow in the field without taking more responsibilities and risks and also we can’t enhance our team leading capabilities, managerial skills without expose to wide range of people.

**Question - 39:**

What’s a time you disagreed with a decision that was made at work?

**Ans:**

Everyone disagrees with the boss from time to time, but in asking this interview question In Computational Fluid Dynamics, hiring managers want to know that you can do so in a productive, professional way. “You don't want to tell the story about the time when you disagreed but your boss was being a jerk and you just gave in to keep the peace. And you don’t want to tell the one where you realized you were wrong.” Tell the one where your actions made a positive difference on the outcome of the situation, whether it was a work-related outcome or a more effective and productive working relationship.

**Question - 40:**

How many basketballs would fit in this room?

**Ans:**

One. You did not ask what is the maximum number of basketballs you can fit in the room.

**Question - 41:**

How do you deal with conflict in the workplace In Computational Fluid Dynamics?

**Ans:**

When people work together, conflict is often unavoidable because of differences in work goals and personal styles. Follow these guidelines for handling conflict in the workplace:

* 1. Talk with the other person.
* 2. Focus on behavior and events, not on personalities.
* 3. Listen carefully.
* 4. Identify points of agreement and disagreement.
* 5. Prioritize the areas of conflict.
* 6. Develop a plan to work on each conflict.
* 7. Follow through on your plan.
* 8. Build on your success.

**Question - 42:**

If you look at a clock and the time is 3:15, what's the angle between the hour and the minute hands?

**Ans:**

Usually, if the answer to a brainteaser seems too easy, chances are the answer's wrong. And in this case, the answer is not zero degrees. The hour hand, remember, moves as well. That is, in addition to the minute hand. And so, at 3:15, the hour hand and the minute hand are not on top of each other. In fact, the hour hand has moved a quarter of the way between the 3 and 4. This means it's moved a quarter of 30 degrees (360 degrees divided by 12 equals 30). So the answer, to be exact, is seven and a half degrees (30 divided by four).

**Question - 43:**

What can you tell me about team work as part of the job In Computational Fluid Dynamics?

**Ans:**

There is usually a team of staff nurses working in cooperation with each other. A team of nurses has to get along well and coordinate their actions, usually by dividing their responsibilities into sectors or specific activities. They help each other perform tasks requiring more than one person.

**Question - 44:**

How do you handle conflicts with people you supervise?

**Ans:**

Copyright © http://InterviewQuestionsAnswers.org
At first place, you try to avoid conflicts if you can. But once it happens and there's no way to avoid it, you try to understand the point of view of the other person and find the solution good for everyone. But you always keep the authority of your position.

**Question - 45:**
How do you think I rate as an interviewer?

**Ans:**
I think you did fine. I'm sure you've conducted a lot of interviews, and it's probably second nature for you now. Thanks for taking the time to meet with me today. I'm sure you have a lot of things you have to juggle every day. I'd say you rate at least ten out of ten. The questions you asked seemed spot on. I can tell you guys are working hard to find the perfect applicant for the job. I'm glad I could meet with you.

**Question - 46:**
Explain me about your experience working in this field In Computational Fluid Dynamics?

**Ans:**
I am dedicated, hardworking and great team player for the common goal of the company I work with. I am fast learner and quickly adopt to fast pace and dynamic area. I am well organized, detail oriented and punctual person.

**Question - 47:**
Do you like to start personal relationships with other employees?

**Ans:**
Well, the right answer is yes and no. Good personal relations can improve the overall performance of a team. But on the other hand, you should not let your emotions to affect your decisions in work.

**Question - 48:**
What do you think is your greatest weakness?

**Ans:**
Don't say anything that could eliminate you from consideration for the job. For instance, "I'm slow in adapting to change" is not a wise answer, since change is par for the course in most work environments. Avoid calling attention to any weakness that's one of the critical qualities the hiring manager is looking for. And don't try the old "I'm a workaholic," or "I'm a perfectionist.

**Question - 49:**
What does quality work mean to you?

**Ans:**
Quality work to be is about doing work to the require or set standard, which is very important when it comes to warehouse operations.

**Question - 50:**
What is your biggest achievement?

**Ans:**
Quality work to be is about doing work to the require or set standard, which is very important when it comes to warehouse operations.

**Question - 51:**
What's your salary history?

**Ans:**
When you are interviewing for a new job, it is common practice for the company to ask you about your salary history. I typically want to know what the candidate's base salary is, if they receive any bonus, the average bonus amount, and any additional compensation or perks, such as 500k matching, stock grants or stock options, paid time off and how much they are required to pay towards their medical premiums.

**Question - 52:**
Why should the we hire you as this position In Computational Fluid Dynamics?

**Ans:**
This is the part where you link your skills, experience, education and your personality to the job itself. This is why you need to be utterly familiar with the job description as well as the company culture. Remember though, it's best to back them up with actual examples of say, how you are a good team player.

**Question - 53:**
What would your first 30, 60, or 90 days look like in this role in Computational Fluid Dynamics?

**Ans:**
Start by explaining what you'd need to do to get ramped up. What information would you need? What parts of the company would you need to familiarize yourself with? What other employees would you want to sit down with? Next, choose a couple of areas where you think you can make meaningful contributions right away. (e.g., “I think a great starter project would be diving into your email marketing campaigns and setting up a tracking system for them.”) Sure, if you get the job, you (or your new employer) might decide there's a better starting place, but having an answer prepared will show the interviewer where you can add immediate impact—and that you're excited to get started.

**Question - 54:**
How do you keep each member of the team involved and motivated?

**Ans:**
Many managers mistakenly think that money is the prime motivator for their employees. However, according to surveys by several different companies, money is consistently ranked five or lower by most employees. So if money is not the best way to motivate your team, what is? Employees' three most important issues according to employees are:
* Respect
* A sense of accomplishment
* Recognition

**Question - 55:**
What type of work environment do you prefer?

**Ans:**
Ideally one that's similar to the environment of the company you're applying to. Be specific.

**Question - 56:**
What are your salary expectations in Computational Fluid Dynamics?

**Ans:**
This question is like a loaded gun, tricky and dangerous if you're not sure what you are doing. It's not uncommon for people to end up talking salary before really selling their skills, but knowledge is power as this is a negotiation after all. Again, this is an area where doing your research will be helpful as you will have an understanding of average salary. One approach is asking the interviewer about the salary range, but to avoid the question entirely, you can respond that money isn't a key factor and you're goal is to advance in your career. However, if you have a minimum figure in mind and you believe you're able to get it, you may find it worth trying.

**Question - 57:**
Do you have good computer skills?

**Ans:**
It is becoming increasingly important for medical assistants to be knowledgeable about computers. If you are a long-time computer user with experience with different software applications, mention it. It is also a good idea to mention any other computer skills you have, such as a high typing rate, website creation, and more.

**Question - 58:**
What is your greatest weakness in Computational Fluid Dynamics? What are you doing to improve it?

**Ans:**
I believe my biggest weakness in Computational Fluid Dynamics is wanting to help anyone I can help. What I mean is I am willing to take on task that are not my job. I want to learn all I can. However, that has helped me get promoted or even asked to help in times of need in other department. I have been know as the "go to person" when help is needed.

**Question - 59:**
Explain an occasion when you had to adapt in the face of a difficult situation?

**Ans:**
One of the most useful interview tactics is to remain positive about your work and achievements. This question lets the candidate draw on their own personal history to show how they have been positive and successful in the face of difficulties. Choose a specific occasion to describe, rather than dealing with generic platitudes.

**Question - 60:**
Why do you want to work in Computational Fluid Dynamics for this organisation?

**Ans:**
Being unfamiliar with the organisation will spoil your chances with 75% of interviewers, according to one survey, so take this chance to show you have done your preparation and know the company inside and out. You will now have the chance to demonstrate that you've done your research, so reply mentioning all the positive things you have found out about the organisation and its sector etc. This means you'll have an enjoyable work environment and stability of employment etc - everything that brings out the best in you.
Question - 61: What problems have you encountered at work?
Ans:
Wow, do we have problems! Where do I begin? Well, most of the problems are internal, just people not working well with each other. I have one person on our team who is a real problem, but it seems like management is afraid to do anything about it. So we all end up having to do extra work to cover for this person, who just doesn't work. We all say that he's retired in place. I think he's just holding on until retirement in a couple years. But he's a real problem. I complain about it--a lot--but nothing ever seems to get done. I've even written negative reviews about the person, hoping he will get canned, but it doesn't happen. I can't wait for him to retire.

Question - 62: What do you know about the company?
Ans:
Any candidate can read and regurgitate the company's "About" page. So, when interviewers ask this, they aren't necessarily trying to gauge whether you understand the mission—they want to know whether you care about it. Start with one line that shows you understand the company's goals, using a couple key words and phrases from the website, but then go on to make it personal. Say, "I'm personally drawn to this mission because..." or "I really believe in this approach because..." and share a personal example or two.

Question - 63: What features of your previous jobs have you disliked?
Ans:
It's easy to talk about what you liked about your job in an interview, but you need to be careful when responding to questions about the downsides of your last position. When you're asked at a job interview about what you didn't like about your previous job, try not to be too negative. You don't want the interviewer to think that you'll speak negatively about this job or the company should you eventually decide to move on after they have hired you.

Question - 64: What types of personalities do you work with best?
Ans:
In the past, I have found it difficult to work with others who see themselves as better than others, who can take criticism, and who refuse to work with others. I have found it challenging to work with them b/c I am a team oriented person who feels the importance of working together over the needs of the individual especially in a learning environment.

Question - 65: Do you have any question regarding this job in Computational Fluid Dynamics?
Ans:
Never ask Salary, perks, leave, place of posting, etc. regarded questions. Try to ask more about the company to show how early you can make a contribution to your organization like. "Sir, with your kind permission I would like to know more about induction and developmental programs?" OR Sir, I would like to have my feedback, so that I can analyze and improve my strengths and rectify my shortcomings.

Question - 66: How do you handle stressful situations?
Ans:
By remaining calm, weighing out all my options and executing a plan to get the situation resolve.

Question - 67: How much do you expect to get paid in Computational Fluid Dynamics?
Ans:
For this be prepared and research salary to find out what similar positions are paying in your area before you go to the interview. Try to find this information out before giving your salary expectations. You can and should provide a range instead of an exact number. But again, don't say any numbers you're not comfortable with because if the employer offers you a salary at the lowest end of your range, you don't have much to negotiate with when it comes to getting a higher salary.
