Question - 9:

what are the different modes in vi editor?

Ans:

There are three basic modes of vi:

Command mode

This is the default when you enter vi. In command mode, most letters, or short sequences of letters, that you type will be interpreted as commands, without explicitly pressing Enter. If you press Esc when you're in command mode, your terminal will beep at you. This is a very good way to tell when you're in command mode.

Insert mode

In insert mode, whatever you type is inserted in the file at the cursor position. Type `a` (lowercase letter a, for append) to enter insert mode from command mode; press Esc to end insert mode, and return to command mode.

Line mode

Use line mode to enter line oriented commands. To enter line mode from command mode, type a colon (`:`). Your cursor moves to the bottom of the screen, by a colon prompt. Type a line mode command, then press Enter. Any sensible command from the Unix line editor `ex` will work, and a few are good to know about. These commands are indicated in this handout by a colon in front of the command. Each time you use a line mode command, you must type a colon to enter line mode, then type the command by the colon prompt at the bottom of the screen, then press Enter when you finish typing the command. (The search commands starting with `/` and `?` work similarly.

Question - 10:

What is the difference between lettered buffer and temporary buffer in Vi Editor?

Ans:

Temporary Buffer

Deleted or copied text goes into a temporary unnamed buffer. The contents of the temporary buffer may be retrieved by using the `p` or `P` commands.

Lettered Buffers

There are 26 lettered buffers (a-z). Contents of a lettered buffer are saved until you copy or delete more characters into it, or until you quit your current vi session.

eg.

From Command Mode

`"ayy` Copy (yank) a line into buffer letter "a"

`"ap` Put contents of lettered buffer a below the current line

Question - 11:

Which command is used to replace many characters in Vi Editor?

Ans:

change command can be used to change a word/line.

`cw` change word forward

`cb` change word backward

`c$` change from cursor to end of line

`cL` change from current line to end of screen

cG change from current line to and of file
or if you want to replace all occurrence of some specific
character
:%s/oldText/newText/g
