SAP B1 Interview Questions And Answers Guide.

Question - 1:

Explain difference between transfer rule&update rules?

Ans:

In context to BW/BI 3.x

transfer rules - mapping the fields in the datasource to the infoobjects in Infosource or target fields. it help you to distinguish which all fields in the datasource are required in the infoobjects in the Infosource.

update rules - to update something. here it revolves around a source(infosource)and a target(data target). update rules are used to update the data targets.you have to create update rules if you supply a data target from an InfoSource with flexible update.

In BI 7.0 Transforamtion - (Tranfer and update rules)

Question - 2:

What are three dimensions provided by SAP?

Ans:

SAP Given Three different kind dimensions for InfoCube.Those are.

1)Data Packet Dimension : Which is going to hold the technical information like request Number etc..

2)Unit Dimension: This dimension can hold the all Unit characteristics like Reference Currencies , UNIT'S etc..

3)Time Dimension : This particular Dimension Can hold the all time characteristics like 0calday,zdate, start date, end date etc..

Question - 5:

Can we load delta load directly without full load? How? What are the steps?

Ans:

Yes we can.

because of for capturing deltas we need to do something before load the deltas.

before going to set the delta mode. you should initialize delta process without data transfer process. after

finishing the this initialization keep the delta mode. and execute the infopackage.
before going to execute info package check weather data source is ready to capture deltas or not. by using the t-code rsa7.

Question - 6:

What advantage of ic with aggregates?

Ans:

if we create aggregates on infocube then query performance will be improved if our query accessing attributes data frequently. The sequence when we execute the query is:

1. Query first goes into cache if it finds relevant data in cache will fetch data otherwise
2. it goes into BI ACCELERATOR (BIA)
3. Aggregates
4. Finally it goes into IC if the data is not available in above 3 stages.

If we maintain aggregates or BIA olap no needs to come upto IC. So time will be reduced. Query performance will be improved.

Question - 7:

What are the common Transport errors in SAP BW?

Ans:

1. NOT CORRECT USAGE.

Reason: When we change the structure of any cube which has Business Warehouse Accelerator Indexes created for it. Change in structure could mean a change as simple as adding a navigational attribute.

Solution: Delete the Indexes (BWA Indexes) first then transport and then rebuild the indexes

2. Info Object not available in active version.

Reason: We get this error when we try to transport the Info Object Catalogs without transporting the info objects.

Solution: As a prerequisite first transport the info objects then transport info object catalogs.

3. Navigational attribute does not exist

Reason: If we mark an object in the cube as navigational attribute and navigational attribute does not exist as navigational in the target system.

Solution: Transport the info object with navigational attribute and then re-import this transport.

Question - 8:

WHERE DO YOU STORE THE MASTER DATA IN BI 7.0?

Ans:

Unlike the older version of BW which uses star schema, BI 7.0 uses the extended star schema. In this, master data is stored outside the cube.

In the star schema, both master data and transaction data resides inside the cube bringing many problems: master data not reusable, computing of alphanumeric values and analysis being limited.

In BI 7.0 Master data is stored outside the cube which makes it reusable, and alphanumeric values can be computed and many more analysis are possible.

Question - 9:

Why we are going for customization? Give me a scenario?

Ans:

1. For Requirement as per company
2. Reporting As Per Module
3. Remove Complexity From End User

Question - 10:

Why we have only 16 Dimension tables in a cube. Is there any reason. Is it a limitation?

Ans:

SAP BI InfoCube Can have maximum 16 Dimension, Why because na Cube shape will have only 16 Dimensions and also Normal data base table will have only 16 keyfields. When we create InfoCube system is going to create tables like F-table and E-table So, we should follow that database concepts Because of that InfoCube will Have only 16 Dimensions..

[View All Answers](#)

Question - 11:

Why is there a restriction of 16 Dim tables in an Info Cube and 16 key fields in an ODS?

Ans:

In all of the database systems there is maximum number of fields allowed to create a primary key (composite key) is 16. An in the case of cube, to fetch a single record a combination of all dimension is used, so this is the reason behind having maximum no. of dimension in cube is 16 only.
