Dot Net Framework Interview Questions And Answers Guide.

Question - 1:

What is a mvc in asp.net?

Ans:

ASP.NET MVC is a part of the ASP.NET Web application framework

Model: The model contains the core information for an application. This includes the data and validation rules as well as data access and aggregation logic.

View: The view encapsulates the presentation of the application, and in ASP.NET this is typically the HTML markup.

Controller: The controller contains the control-flow logic. It interacts with the Model and Views to control the flow of information and execution of the application.

Question - 16:

Where The Inheritance is useful? How we decide the situation of inheritance?

Ans:

Mostly inheritance requires in large classes where every
time searching and writing of same data is impossible. That
case requires us to define some inherited functions methods
in classes.Whenver they required they simply inherited from
inheritance class where they are already defined along with
their functionality to handling some other data pieces.
