## About Interview Questions Answers

**Interview Questions Answers . ORG** is an interview preparation guide of thousands of Job Interview Questions And Answers, Job Interviews are always stressful even for job seekers who have gone on countless interviews. The best way to reduce the stress is to be prepared for your job interview. Take the time to review the standard interview questions you will most likely be asked. These interview questions and answers on SNMP will help you strengthen your technical skills, prepare for the interviews and quickly revise the concepts.

If you find any **question or answer** is incorrect or incomplete then you can **submit your question or answer** directly with out any registration or login at our website. You just need to visit [SNMP Interview Questions And Answers](#) to add your answer click on the *Submit Your Answer* links on the website; with each question to post your answer, if you want to ask any question then you will have a link *Submit Your Question*; that's will add your question in SNMP category. To ensure quality, each submission is checked by our team, before it becomes live. This [SNMP Interview preparation PDF](#) was generated at **Wednesday 29th November, 2023**

You can follow us on FaceBook for latest Jobs, Updates and other interviews material.

# SNMP Interview Questions And Answers Guide.

### Question - 1:

Explain networking?

#### Ans:

Networking is defined as connectivity between peers inside network and outside network. Inside network connectivity in Networking topology is known as Lan and outside Network connectivity is called as WAN. Lan is defined as Local Area Network between peer systems and Wan is defined as Wide Area Network between Lan to a Lan in different Location and this connectivity of lan in different locations is defined as WAN. Networking depends on OSI layer which is defined as Open System Interworking. In OSI Layer data is reached to destination from source passing all the 7 layers of OSI layer and these 7 layers were on either side of network and they are defined as

- Presentation Layer
- Data-link Layer
- Network Layer
- Transport Layer
- Session Layer
- Physical Layer
- Application Layer

### Question - 2:

Net working is What?

#### Ans:

It is connection between two or more computer or devices through the transmission media for the purpose of communication and accessing resources is called network and the whole process is called networking.

[View All Answers](#)

### Question - 3:

What network you used?

#### Ans:

LAN, Wi-Fi, WLAN, WAN, VAN, PAN, CAN

[View All Answers](#)

### Question - 4:

What is the use of proxy in SNMP. Does it require only when the network has snmpv1 and snmpv2?

#### Ans:

Proxy can be defined as an intermediately device, which plays the role of an agent in the Context of SNMP. It works as a Virtual LAN to the Devices Which are not having an Ethernet Interface, Like MODEMS and Multiplexers.

By using the SNMPPROXY we can Know the STATUS of these (MODEMS etc) devices.

When an Agent performs PROXY role, it acts on the behalf of one or more other nodes. A NETWORK MANAGER that wishes to obtain the information from or control the node communicates with the proxy agent. The proxy agent then

translates the MANAGER's request to a form appropriate for the target system and uses an appropriate network management protocol to communicate with the target system.

### Question - 5:

How can i make my server a domain?

#### Ans:

creating daemon is very simple in Linux. you just need to create a child process from its parent process and kill the parent process. also you should close all the I/O streams. [as daemon is a background process which is not interactive in nature].

latter on you can write a init script in /etc/init.d/ to make it a service.

### Question - 6:

What is data com? How it works, what is difference between datacom and telecom?

#### Ans:

This is the communication between computer systems or devices. A computer network is any set of computers or devices connected to each other with the ability to exchange data.

Data Communication is the process of transferring information from a sender to a receiver with the use of a medium in which the communicated information is understood by both sender and receiver. It is a process that allows organisms to exchange information by several methods.

Telecommunications is a general term for a vast array of technologies that send information over distances. Mobile phones, land lines, satellite phones and voice over Internet protocol (VoIP) are all telephony technologies -- just one field of telecommunications. Radio, television and networks are a few more examples of telecommunication.

### Question - 7:

A COM PORT IS A----- PORT

#### Ans:

com port is a communication port or a serial port. which is used to connect the mouse, keyboard, router and modem.

[View All Answers](#)

### Question - 8:

MEMORY THAT IS PAGED OUT TO THE HARDWARE IS KNOWN AS

#### Ans:

its cache memory.

A CPU cache is a cache used by the central processing unit of a computer to reduce the average time to access memory. The cache is a smaller, faster memory which stores copies of the data from the most frequently used main memory locations. As long as most memory accesses are to cached memory locations, the average latency of memory accesses will be closer to the cache latency than to the latency of main memory.

When the processor needs to read from or write to a location in main memory, it first checks whether a copy of that data is in the cache. If so, the processor immediately reads from or writes to the cache, which is much faster than reading from or writing to main memory.

### Question - 9:

What is the broadcast address of the subnet address 172.16.8.159 ? (choose from following)

172.16.99.255  
172.16.127.255  
172.16.255.255  
172.16.64.127  
172.16.64.260

#### Ans:

172.16.8.159 25  
172 16 8 159  
10101100.00010000.00001000.10011111  
8 +8 +8 +1 =25  
11111111.11111111.11111111.10000000

Zeros mean, that you can change address bit, so

159=10011111 and last combination of 0011111 is changeable,  
so max number in you network usually is broadcast address.  
so last byte is 1(unchangeable)111111(max sequence of  
changeable bits).  
11111111(bin) means 255(dec)  
Whole address 10101100.00010000.00001000.11111111 =  
172.16.8.255

### **Question - 10:**

The protocols found in network layer are

IP  
TCP  
SPX  
PI  
ICMP?

### **Ans:**

Protocols TCP/IP is used to configure windows Operating System which is abbreviated as Transmission Control Protocol for transmitting data from one system to another. Protocols IPX/SPX are used in Unix operating system for transmitting data. Protocols ICMP are used as Internet Protocols.

### **Question - 11:**

The devices found in datalink layer are

Router  
Bridge  
NIC  
Repeater  
Memory?

### **Ans:**

NIC (network interface card or Lan card)

[View All Answers](#)

### **Question - 12:**

Multiple Choice

Which of the following protocols are in TCP/IP protocol suite?

FTP  
PPP  
HTTP  
IP  
SMTP?

### **Ans:**

FTP,PPP,IP

### **Question - 14:**

What marchent nevi all solve paper?

### **Ans:**

yes

[View All Answers](#)

### **Question - 15:**

Which switching technology reduces the size of a broadcast domain?

### **Ans:**

By using VLAN technology we can reduces the size of broadcast domain.

VLAN (virtual local area network) is a logical grouping or

segmenting the devices under a single broadcast domain.  
as a result provides Security and Flexibility.

### **Question - 16:**

Why it is important to defragment disks in computer?

#### **Ans:**

Defragmentation is simple says bring the data at once place in the drive....when we copied or save a file it save on different sectors on the drive when u browse for the file it will search every sector id (for every sector we have an id).when defragmentation done all the data bring upto one part and it will take less time to retrieve the data...

### **Question - 17:**

How to set a local net?

#### **Ans:**

IIS used for Browsing Intranet

Net (all websites):through CCProxy software

Or

Install windows 2003 server run Domain controller promotions

--> Install DNS server default setting(not Manually)

In LAN system --> Local Area Connection Status-->In

properties--> Gateway is server IP address and DNS are ISP

DNS(That system added to the windows 2003 server domain)

ccproxy software is easy

### **Question - 18:**

How does any network vendor decide to go for NMS or EMS?

#### **Ans:**

An element management system (EMS) manages one or more of a specific type of network elements (NEs).

Using an EMS a user can manage all the features of each NE individually, but not the communication between NEs.

Communication between NEs is managed by the network management system (NMS).

A network management system is a combination of hardware and software used to monitor and administer a network.

Network management refers to the maintenance and administration of large scale computer networks at the top level.

In brief,If network vendor wants to manage multiple

EMS,vendor can go to NMS.

If network vendor wants to manage multiple EMS,vendor can decide to go for NMS.

If network vendor want to manage one or more of a specific type of network elements (NEs),vendor can decide to go for EMS.

**Question - 22:**

How to configure RAID?

**Ans:**

first we should RAID card ....which is easily available in market connect it on ur mother board . then connect it with ur hard disk  
then before starting the os in a system configure ur RAID  
first  
just select whatever instruction come in your way...it is very simple to follow  
and finally select ur type of RAID...
