Question - 1:
What is ETL TESTING?
Ans:
A tester generally does the following task in ETL environment:
1. Review the requirements
2. Review the source data - data profiling.
3. Modify the source data to meet any requirements that weren't already met with the original source data.
4. Execute the ETL job(s)/transformation(s).
5. Validate the results.
6. Validate that the data is usable. If the data isn't usable, then you really haven't gained anything.

Question - 2:
What is the difference between quality and testing?
Ans:
- Quality means only and only "meeting specification" nothing else.
- what a user want? if he is getting everything then he will say good quality.
- Quality leads to a brand not the vice verse.
- Testing doesn't mean quality improvement.
- Testing means exercising your brain a little bit to examine a product. In turn the result is improvement of quality.
SO QUALITY IS NOT THE AIM OF TESTING, BUT OUTPUT LEADS TO IMPROVEMENT.

Question - 3:
What is the difference between development and testing?
Ans:
Development is the process to write the source code for a given program for a specific application. It is done by developers. Testing on the other hand is to test the application with the intention of finding errors/ defects in it. It is done by Test Engineers.

Question - 4:
What is the difference between testing and debugging?
Ans:
Testing is the process of finding bugs, defects or error or it is simply checking whether the software/application is matching with the SRS or not. It is done by testers. Debugging is fixing of bugs. It is done by developers.

Question - 5:
What is meant by iterative model? What is its working principle? What are its advantages and what are its drawbacks?
Ans:
In iterative model, the requirements are given in advance to the tester based on which he can prepare test cases. Using the test cases, the developer can prepare the required source code accordingly. This method is also known as Test Driven Development (TDD).

**Question - 6:**
What are the parameters you are considering for object identification?

**Ans:**
Normal identification—HTML TAG, Name and Inner text in case of web element or link. If that is not enough for identification, it will go for assistive identification items and if not able to recognize then after it will use ordinal identification like index location creation time in case of web browser.

**Question - 7:**
How to capture the text from the application using QTP?

**Ans:**
```vbscript
Browser("Browser").Page("Page").Webobject("PropertyName:=PropertyValue").GetRo("Property")
```

**Question - 8:**
What is your role and responsibilities as automation testing engineer?

**Ans:**
1) Write the Test script
2) Run the Test Script
3) And make a Report

**Question - 9:**
Do you know images are dynamically changes how to compare two images?

**Ans:**
for this you can use isequalbin method. I am showing below 'Code for comparing two images.'
```vbscript
Set CompareUtil = CreateObject("Mercury.FileCompare")
IsEqualFlag = CompareUtil.IsEqualBin(Img1, Img2, 0, 1)
in above code 0 means in file compare class showing no error: syntax FC_NO_ERROR = 0
1 means in file compare class showing difference of size: FC_DIFF_SIZE = 1
```

**Question - 10:**
Suppose a[0]=I
a[1]=N
a[2]=D like that it goes.
output we need INDIA?

**Ans:**
```vbscript
option Explicit
Dim Str, i, arr_len
Dim arr(10)
arr(0)="I"
arr(1)="N"
arr(2)="D"
arr(3)="I"
arr(4)="A"
arr_len=Ubound(arr)
for i=0 to arr_len
Str=Str&arr(i)
next
msgbox Str
```
