Question - 7:

There are few items which we have to put items in boxes. if 3 items put in each box, 1 item left outside. if 4 items put in each box, 1 item left outside. if 5 items put in each box, 1 item left outside. if 6 items put in each box, 1 item left outside. if 7 items put in each box, 0 item left outside. How many number of item are there?

Ans:

Answer is 301..

3 - 100 boxes - 1 left

4 - 75 boxes - 1 left

5 - 60 boxes - 1 left

6 - 50 boxes - 1 left

7 - 43 boxes - 0 left

Solution:

3,4,5,6 - 1 left & 7 - 0 left - (ie) - least common multiple

of 3,4,5,6 + 1 which is divisible by 7.

the least common multiples are: 60,120,180,240,300

61 - not divisible by 7

121 - not divisible by 7

181 - not divisible by 7

241 - not divisible by 7

301 - divisible by 7

hence 301 is the answer

Question - 16:

Explain impersonation?

Ans:

At times users access a resource as though they were someone else. This is known as impersonation. For example, if a web page has no access controls, then any user can access that web page. HTML pages, ASP pages, and components in version 3.0 and earlier can be accessed through two accounts named IUSR_machinename and IWAM_machinename. Both the accounts are set up during IIS installation, and are automatically added to all the folders in every web site on the server.

Anonymous access to a resource in IIS makes the task of identifying a user extremely difficult. But there is no need to authenticate a user in the case of IIS. When IIS receives a request for a web page or other resource that has permission for anonymous access, IIS treats the IUSR_machinename account as the user's account, to access the resources. If the resource requested by the user is an ASP page that uses a COM or COM+ component, that component is executed using the IWAM_machinename account.
