**Question - 5:**

Explain What is main difference between Continuous Integration and Iterative Models?

**Ans:**

Continuous integration:

-----  
First core functionality implemented. Then new requirements are added to that implemented part and checking whether it is giving some meaningful functionality and then again some requirements are added. This process continues until the system is fully developed.

Advantage: Client gets small working system very early.

Iterative: Total opposite to the above.

-----  
Disadvantage : Client has to wait a long for his/her desired system
